Cambridge International General Certificate of Secondary Education

## PHYSICS

0625/43
Paper 4 Extended Theory
May/June 2016
MARK SCHEME
Maximum Mark: 80
Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.
Cambridge is publishing the mark schemes for the May/June 2016 series for most Cambridge IGCSE ${ }^{\circledR}$, Cambridge International A and AS Level components and some Cambridge O Level components.

## NOTES ABOUT MARK SCHEME SYMBOLS \& OTHER MATTERS

| B marks | are independent marks, which do not depend on other marks. For a B mark to <br> scored, the point to which it refers must be seen specifically in the candidate's <br> answers. |
| :--- | :--- |
| M marks: | are method marks upon which accuracy marks (A marks) later depend. For an M <br> mark to be scored, the point to which it refers must be seen in a candidate's <br> answer. If a candidate fails to score a particular M mark, then none of the <br> dependent A marks can be scored. |
| C mare compensatory marks in general applicable to numerical questions. These |  |
| can be scored even if the point to which they refer are not written down by the |  |
| candidate, provided subsequent working gives evidence that they must |  |
| have known it. For example, if an equation carries a C mark and the candidate |  |
| does not write down the actual equation but does correct substitution or working |  |
| which shows he knew the equation, then the C mark is scored. A C mark is not |  |
| awarded if a candidate makes two points which contradict each other. Points |  |
| which are wrong but irrelevant are ignored. |  |

|  | Cambridge IGCSE - May/June 2016 | 0625 | 43 |

| Not/NOT | This indicates that an incorrect answer is not to be disregarded, but cancels <br> another otherwise correct alternative offered by the candidate, i.e. right plus <br> wrong penalty applies. |
| :--- | :--- |
| ecf | meaning "error carried forward" is mainly applicable to numerical questions, but <br> may in particular circumstances be applied in non-numerical questions. This <br> indicates that if a candidate has made an earlier mistake and has carried an <br> incorrect value forward to subsequent stages of working, marks indicated by ecf <br> may be awarded, provided the subsequent working is correct, bearing in mind the <br> earlier mistake. This prevents a candidate from being penalised more than once <br> for a particular mistake, but only applies to marks annotated ecf. |

Significant figures Answers are normally acceptable to any number of significant figures $\geq 2$. Any figures exceptions to this general rule will be specified in the mark scheme.

Units Deduct one mark for each incorrect or missing unit from an answer that would otherwise gain all the marks available for that answer: maximum 1 per question. No deduction is incurred if the unit is missing from the final answer but is shown correctly in the working.

Condone wrong use of upper and lower case symbols, e.g. pA for Pa .
Arithmetic errors Deduct one mark if the only error in arriving at a final answer is clearly an arithmetic one. Regard a power-of-ten error as an arithmetic error.

Transcription Deduct one mark if the only error in arriving at a final answer is because errors
previously errors calculated data has clearly been misread but used correctly.
Fractions Allow these only where specified in the mark scheme.
Crossed out work Work which has been crossed out and not replaced but can easily be read, should be marked as if it had not been crossed out.

Use of NR (\# key on the keyboard). Use this if the answer space for a question is completely blank or contains no readable words, figures or symbols.

| Question | Answer | Marks |
| :---: | :--- | :---: |
| 1 (a) | force/vector has size $/$ magnitude and direction | B1 |
| 1 (b)(i) | 35 N | B1 |
| 1 (b)(ii) | $(a=) F \div m$ or $35 \div 14$ (e.c.f.(i)) | C1 |
|  | $2.5 \mathrm{~m} / \mathrm{s}^{2}$ (e.c.f.(i)) | A1 |
| 1 (c) | both vectors to scale and correct angle (by eye) | B1 |
|  | resultant and parallelogram/two correct sides of triangle | B1 |
|  | value between $0.83-0.87 \mathrm{~m} / \mathrm{s}$ (and angle between $88^{\circ}$ and $92^{\circ}$ ) | B1 |

| Question | Answer | Marks |
| :---: | :--- | :---: |
| 2(a) | $(p=) m v$ or $2000 \times 18$ <br> $36000 \mathrm{kgm} / \mathrm{s}($ or Ns$)$ | C1 |
| 2(b)(i) | $15000 \mathrm{kgm} / \mathrm{s}($ or Ns$)$ | B1 |
| 2(b)(ii) | $15000 \mathrm{kgm} / \mathrm{s}($ or Ns$)($ e.c.f.(i) $)$ | B1 |
| 2(b)(iii) | $(F=) p \div t$ or $m v \div t$ or $15000 \div 0.20($ e.c.f.(i)/(ii) $)$ <br> 75000 N | C1 |
| 2(c) | (increased time causes) decreased rate of: <br> change of momentum/acceleration/deceleration/impulse $\div$ time <br> smaller forces on people/less injury | A1 |
