

	UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education
CANDIDATE NAME	
CENTRE NUMBER	CANDIDATE NUMBER
BIOLOGY	0610/32
Paper 3 Exten	led October/November 2010
	1 hour 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, Candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams or graphs.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 19 printed pages and 1 blank page.

1 Fig. 1.1**A** shows a buttercup, *Ranunculus cymbalaria*. Fig. 1.1**B** shows details of a flower of the same plant.

For Examiner's Use

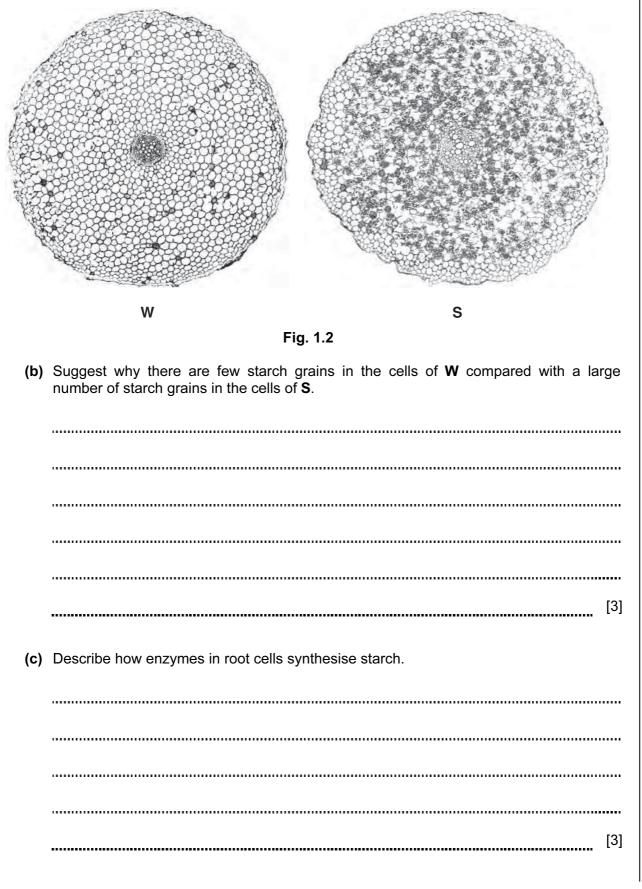

Fig. 1.1

(a) Explain, using only features visible in Fig. 1.1, why *Ranunculus cymbalaria* is classified as a dicotyledonous plant rather than as a monocotyledonous plant.

[2]

Fig. 1.2 shows a transverse section through a buttercup root at the end of the cold winter (\mathbf{W}) and at the end of the warm, moist summer (\mathbf{S}) . At the end of the winter, the cells contain very few starch grains. At the end of the summer, most of the root cells contain many starch grains.

For Examiner's Use

(d)	As temperature is increased, for example from 10 $^{\circ}\text{C}$ to 30 $^{\circ}\text{C},$ enzyme activity increases.	For Examiner's Use
	Explain how increasing temperature affects enzyme activity.	
	[2]	

[Total: 10]

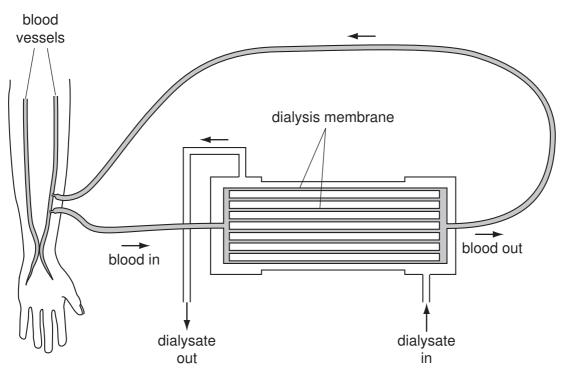

BLANK PAGE

(a) Define the term *excretion*. Examiner's _____ [3]

For

Use

(b) Explain how, when the patient is receiving dialysis treatment

(i) the loss of plasma proteins and red blood cells is prevented,

 [1]

6

2

(ii)	the normal glucose concentration of the blood is maintained.	For Examiner's Use
	[2]	
	[2]	

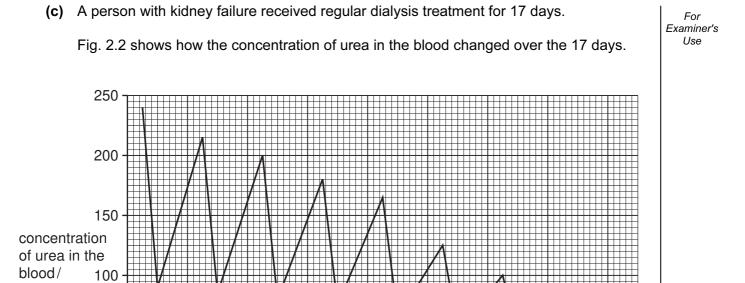

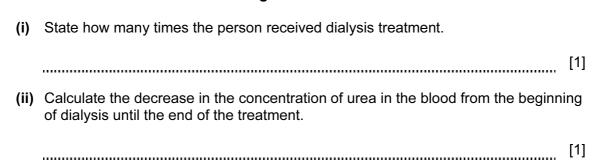

Fig. 2.2

time/days

mg per dm³

(iii) Describe the changes that occur in the urea concentration in the blood over the period shown in Fig. 2.2. You will gain credit for using the data in Fig. 2.2 in your answer. [3] (iv) Explain the changes in urea concentration in the blood as shown in Fig. 2.2. [4] [Total: 15]

For

Examiner's Use

For Examiner's Use

Some students investigated the breathing of a 16-year old male athlete. Fig. 3.1 shows the pattern of his breathing for 60 seconds when resting. Fig. 3.2 shows the pattern of his breathing while he took some exercise for 60 seconds.

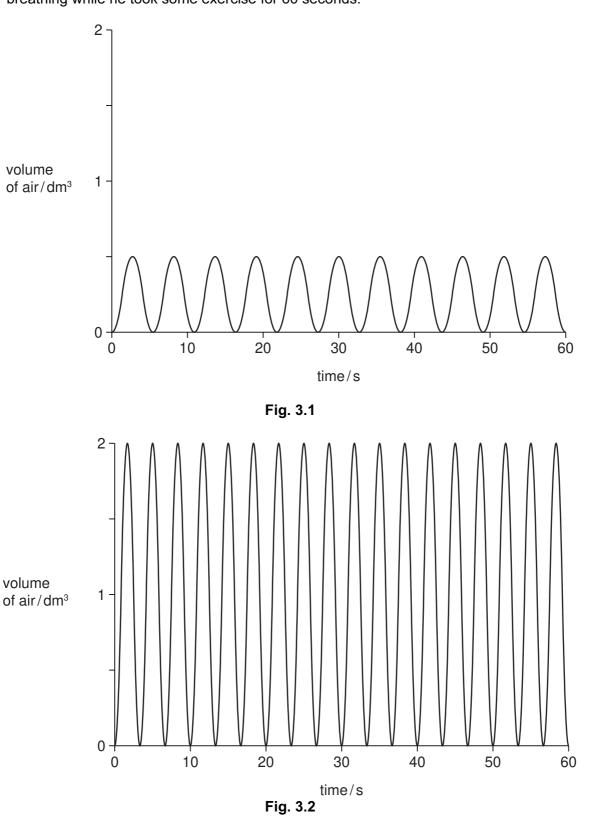

Table 3.1 shows a summary of the results obtained by the students.

	breathing at rest	breathing during exercise
volume of air breathed in with each breath / dm ³	0.5	
rate of breathing / number of breaths per minute	11	
volume of air breathed in per minute / dm ³	5.5	

(b) Using information from Fig. 3.2, complete Table 3.1.

Write your answers in Table 3.1. [3]

(c) Explain the effect of exercise on the student's breathing.

[5]

For Examiner's

Use

(d) During strenuous exercise, the hormone adrenaline causes changes in the pulse rate and in the concentration of glucose in the blood.

For

Examiner's Use

Explain the importance of these changes during strenuous exercise.

pulse rate

	Iman immunodeficiency virus (HIV) infects white blood cells. The virus is reproduced these white blood cells.
[a) D€	escribe what may happen to viruses that leave infected white blood cells.
	[2]
(b) De	escribe the possible long-term effects of HIV on the immune system.
	[3]
(c) Pe	eople with HIV may be treated with a variety of drugs.
(i)	Define the term <i>drug</i> .
	[1]
(ii)	Explain why antibiotics cannot be used to control HIV.
	[2]
	[Total: 8]

5 In many parts of the world, raw sewage drains into rivers. Raw sewage contains organic matter which acts as food for bacteria. The breakdown of organic matter by bacteria has an effect on the oxygen concentration and species of invertebrate animals in rivers.

Fig. 5.1 shows the changes in oxygen concentration along a river.

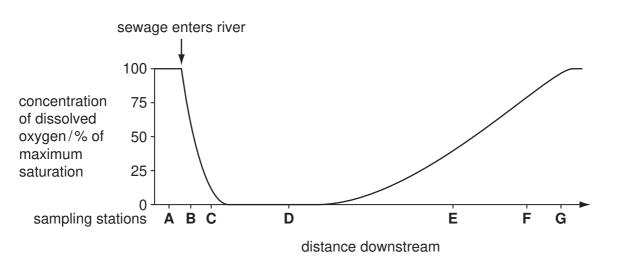

Table 5.1 shows the invertebrate animals at seven sampling stations, \bf{A} to \bf{G} , along the river.

Table 5.1

key

 ✓ invertebrate animal present

invertebrate		sampling stations							
animals	Α	В	С	D		E	F	G	
stonefly nymph	\checkmark							\checkmark	
freshwater shrimp	\checkmark						\checkmark	\checkmark

midge larva	\checkmark	\checkmark	\checkmark			\checkmark	\checkmark	\checkmark	
rat-tailed maggot		\checkmark	\checkmark	\checkmark					
water louse	\checkmark	\checkmark				\checkmark	\checkmark	\checkmark	
wandering snail						\checkmark	\checkmark	\checkmark	
tubifex worm	\checkmark	\checkmark	\checkmark	\checkmark		\checkmark	\checkmark	\checkmark	

For

Examiner's Use (a) (i) Describe the changes that occur to the oxygen concentration in the river as shown in Fig. 5.1. You will gain credit for using the data in Fig. 5.1 in your answer. [4] (ii) Name the invertebrate animal that is only found in water with the highest oxygen concentration. [1] (iii) Name the **two** invertebrate animals that tolerate the lowest oxygen concentrations. [1] (iv) Suggest and explain the changes in the number of different species of invertebrate animals along the river, as shown in Table 5.1. [3]

For Examiner's

Use

For Examiner's Use

Sewage treatment works receive raw sewage.

This sewage contains food molecules, such as cellulose, starch, protein and fat.

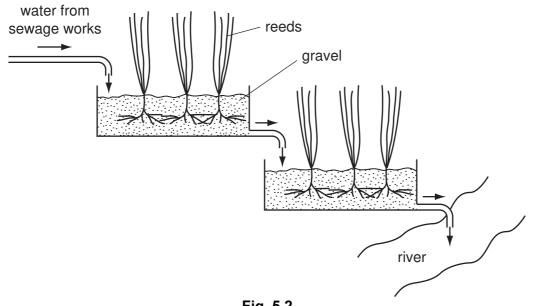

(b) Explain how bacteria breakdown these nutrient molecules.

[4]

The concentration of nitrate ions is often very high in the water leaving a sewage treatment works.

In some places, the water passes through a series of reed beds as shown in Fig. 5.2.

The water leaving the reed beds and entering the river contains very low concentrations of nitrate ions.

(c) Explain two ways in which the concentration of nitrate ions may be reduced as the water flows through the reed beds. [3] (d) Some bacteria that live in reed beds release methane. Other sources of methane are cattle and flooded rice fields. Explain the environmental consequences of an increase in the methane concentration in the atmosphere. [3]

[Total: 19]

(a) Define the term self-pollination. 6

	Examiner's Use
[2]	

For

Snapdragon plants have flowers with three colours: red, pink and white.

Some students investigated the inheritance of flower colour in snapdragons.

In cross 1 they cross-pollinated plants that were homozygous for red flowers with plants that were homozygous for white flowers. They collected and planted the seeds from cross 1. All of the resulting plants had pink flowers.

In cross 2 they self-pollinated all the pink-flowered plants and found that in the next generation there were red-flowered plants, white-flowered plants and pink-flowered plants.

(b) Complete the genetic diagrams to show how flower colour is inherited in snapdragon plants.

Use the symbol I^{R} for the allele for red flowers and I^{W} for the allele for white flowers.

cross 1	parental phenotypes	red flowers	×	white flowers
	parental genotypes		×	
	gametes			
	offspring genotypes			
	offspring phenotypes		pink flowers	

18

cross 2	parental phenotypes	pink flowers	×	pink flowers	For Examiner's
	parental genotypes		×		Use
	gametes ()
