

UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

	NDIDATE MBER
CANDIDATE NAME	

Candidates answer on the Question Paper.

No additional materials are required.

Paper 6 Alternative to Practical

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 12 printed pages.

1 The apparatus below was used to make oxygen. The tube of manganese oxide was added to the hydrogen peroxide solution by releasing the cotton.

For Examiner's Use

(a)	Complete the boxes to identify the pieces of apparatus.	[2]
-----	---	-----

Why was the tube of manganese oxide suspended in the flask?	
	[1]
Give a test for oxygen.	
test	
result	[2]
	Give a test for oxygen. test

[Total: 5]

2 A steel spoon can be coated in silver using electrolysis. The spoon must be very clean and free of grease.

For Examiner's Use

[Total: 5]

(a)	Sug	ggest	
	(i)	one advantage of putting a thin layer of silver on the spoon,	
			[1]
	(ii)	one disadvantage if the spoon is used frequently,	
			[1]
	(iii)	why the spoon must be very clean and free of grease?	
			[1]
(b)	Wh	ich electrode should be the spoon?	
			[1
(c)	lde	ntify the metal from which the other electrode is made.	
			[1]

3 Three unlabelled bottles of chemicals each contained one of the following liquids: sodium nitrate dissolved in water; pure water; hexene. (a) Give a test by which you could identify sodium nitrate solution. test result (b) Give a test by which you could identify pure water. test result (c) Give a test by which you could identify hexene. test result

For Examiner's Use

[Total: 6]

4 A student investigated the temperature change produced when equal lengths of magnesium ribbon reacted with excess dilute sulfuric acid of different concentrations (labelled solutions **A**, **B**, **C**, **D** and **E**).

For Examiner's Use

Five experiments were carried out.

Experiment 1

Using a measuring cylinder, 20 cm³ of sulfuric acid solution **A** was poured into a beaker. The initial temperature of the solution was measured. A length of magnesium ribbon was added to the solution and stirred. The highest temperature reached was measured.

Experiment 2

Experiment 1 was repeated using solution **B** instead of solution **A**. The initial and highest temperatures were measured as before.

Experiment 3

Experiment 1 was repeated using solution **C**. The initial and highest temperatures were measured.

Experiment 4

Experiment 1 was repeated using solution **D**. The initial and highest temperatures were measured.

Experiment 5

Experiment 1 was repeated using solution **E**. The initial and highest temperatures were measured.

Use the thermometer diagrams in the table on page 6, to record the initial and highest temperatures in each experiment.

For Examiner's Use

solution of sulfuric acid	thermometer diagram	initial temperature /°C	thermometer diagram	highest temperature /°C	change in temperature /°C
A	30 -25 -20		35		
В	30 -25 -20		35 30		
С	25		35		
D	30 -25 -20		35		
E	30 -25 -20		30 - 25 - 20		

[4]

(a) Work out the temperature change for each experiment and record the values in the table. [1]

change in temperature /°C Use the results and observations to answer the following questions. What type of chemical reaction occurs when magnesium reacts with dilute sulfuric acid? Three aqueous solutions **K**, **L** and **M**, were analysed. **L** was a solution of sodium hydroxide. The tests on the solutions and some of the observations are in the table. Complete the observations in the table. Do not write any conclusions in the table.

For Examiner's Use

	tests	observations
(a)	Appearance of the solutions.	
	solution K	colourless liquid
	solution L	colourless liquid
	solution M	colourless liquid
(b)	Universal Indicator paper was used to test the pH of each solution.	
	solution K	pH 10
	solution L	pH[1]
	solution M	pH 2
(c)	tests on solution K	
	 (i) Drops of solution K were added to copper sulfate solution in a test-tube. Excess of solution K was then added to the test-tube. (ii) Experiment (c)(i) was repeated using aqueous 	pale blue precipitate formed deep blue solution formed
	aluminium sulfate instead of aqueous copper sulfate.	white precipitate formed insoluble in excess
	(iii) A few drops of nitric acid and silver nitrate solution were added to solution K .	no visible reaction
(d)	tests on solution L	
	(i) Experiment (c)(i) was repeated using solution L .	[1]
	(ii) Experiment (c)(ii) was repeated using solution L.	
		[3]
(e)	test on solution M	
	Experiment (c)(iii) was repeated using solution M .	white precipitate formed

(f)	What conclusions can you make about solution K ?	For Examiner's Use
	[2]	
(g)	What conclusions can you make about solution M ?	
	[2]	
	[Total: 9]	

6 Dilute hydrochloric acid was added to excess calcium carbonate in a beaker as shown.

The beaker was placed on a balance and the mass of the beaker and contents recorded every minute.

The results are shown in the table.

mass of beaker and contents/g	184.0	178.0	175.6	174.6	174.0	174.0
time/min	0	1	2	3	4	5

(a) Plot the results on the grid and draw a smooth line graph.
