MARK SCHEME for the May/June 2008 question paper

9700 BIOLOGY

9700/04

Paper 4 (A2 Structured Questions), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2008 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

|---|--------|---------------------------------------|---------|--|------------------------|-------------------------|--|--|--|--|
| | | | | GCE A/AS LEVEL – May/June 2008 | 9700 | 04 | | | | |
| 1 | (a) | high | ier po | opulation (growth), higher (rate of) deforestation / ora ; | | | | | | |
| | | ref. | 2 nai | med countries (or letters) and paired figs ; | | | | | | |
| | | ref. | Vietn | nam (not fitting trend); | | [2 max] | | | | |
| | (b) | (i) | 1 | ref. variety of, species / organisms / plants / animals ; | | | | | | |
| | | | 2 | variation within species / AW ; | | | | | | |
| | | | 3 | genetic diversity between species / AW ; | | [2 max] | | | | |
| | | (ii) | ecor | nomic | | | | | | |
| | | | 1 | (some, species / plants / animals may have) uses in th | e future ; | | | | | |
| | | | 2 | medical uses / example ; | | | | | | |
| | | | 3 | resource material; e.g. wood for building / fibres for cl | othes | | | | | |
| | | | 4 | food (for humans) / agriculture ; | | | | | | |
| | | | 5 | tourism / example ; | | | | | | |
| | | | 6 | ref. maintain gene pool / genetic diversity ; | | | | | | |
| | | | 7 | prevention of natural disasters ; | | | | | | |
| | | | 8 | AVP ; e.g. ref. biological control (predators / parasites | reduce pest popu | ulations) [4 max] | | | | |
| | | | | | | [Total: 8] | | | | |
| 2 | (a) |) A – (pancreatic) duct ; A capillary | | | | | | | | |
| - | (u) | | | of Langerhans / α and β cells ; | | [2] | | | | |
| | | 0- | 13101 | or Langemans / a and p cens , | | [ک] | | | | |
| | (b) | α се | ells / | lin ; | | | | | | |
| | | into the blood / not into a duct ; | | | | | | | | |
| | (c) | 1 | incre | eases permeability of membrane to glucose / increases | s alucose uptake | : | | | | |
| | () | 2 | | eases respiration of glucose ; | 5 | , | | | | |
| | | 3 | | eases), conversion of glucose to glycogen / glycogene | esis : | | | | | |
| | | 4 | • | eases) protein / fat, synthesis ; | | [2 max] | | | | |
| | (d) | 1 | it is i | identical to human insulin / ora ; | | | | | | |
| | | 2 | work | s better than non-human insulin / more rapid response | e; | | | | | |
| | | 3 | no / | fewer, rejection problems / side effects / allergic reacti | ons; | | | | | |
| | | 4 | ref. t | to ethical / moral / religious, issues ; | | | | | | |
| | | 5 | chea | aper to produce in large volume / unlimited availability | ; R cheap to pr | oduce | | | | |
| | | 6 | less | risk of, transmitting disease / infection; | | | | | | |
| | | 7 | - | d for people who have developed intolerance / allergic <u>nimal</u> insulin ; | reactions / immu | ne responses [2 max] | | | | |

| Page 3 | | | Mark Scheme GCE A/AS LEVEL – May/June 2008 | Syllabus 9700 | Paper 04 | |
|--------|-----|-------|---|--|--------------------|----------------|
| | | (1) | | · · · · | | |
| | (a) | (i) | 1 | anthers, versatile / loosely attached / attached at one | | |
| | | | 2 | anthers / stamens / tassels / androecium, on long filan | - | (of flower); |
| | | | 3 | anthers / stamens / tassels / androecium, above leave | s; | |
| | | | 4 | stigmas / silks, hang out (of flower); | | \ |
| | | | 5 | stigmas, large surface area / hairy / feathery / branche | d, (to catch polle | en); [3 max |
| | | (ii) | adv. 1 | <i>antages</i> genetic variation / more diverse gene pool / increased | dene pool . | |
| | | | 2 | increased heterozygosity; | gene peer, | |
| | | | 3 | less likely that harmful recessive alleles will be expres | sed : | |
| | | | 4 | <u>hybrid vigour</u> / decreased inbreeding depression ; | , | |
| | | | 5 | ability to respond to changing conditions / named exar e.g. different environments / pests / disease / increase | • | pring [3 max |
| | (b) | (i) | 1 | cut <u>DNA</u> (into fragments) ; | | |
| | | | 2 | by, restriction enzymes / named enzyme; | | |
| | | | 3 | place on (agarose) gel ; | | |
| | | | 4 | apply, current / p.d. / electricity ; | | |
| | | | 5 | fragments travel towards anode ; | | |
| | | | 6 | short fragments travel, further / faster, than long ones | ; A mass of fra | agments |
| | | | 7 | visualise DNA with UV light / other means of visualisat | ion ; | |
| | | | 8 | AVP; e.g. Southern blotting / described | | [4 max |
| | | (ii) | 1 | change to, primary structure / secondary structure / shape ; | tertiary structure | / folding / 3D |
| | | | 2 | protein / enzyme, cannot carry out its normal function | | |
| | | | 3 | (could be an enzyme) that is essential for a metabolic | pathway ; | |
| | | | 4 | (could) control the expression of another gene / series | of genes; | [2 max |
| | (| (iii) | 1 | (only) one base / base pair / triplet, needs to chamaize); | ange (for teosin | te to become |
| | | | 2 | idea that this could occur in a natural population of teo | sinte / mutation | ; |
| | | | 3 | variant, looks different / easy to spot ; | | |
| | | | 4 | early farmers could have selected it to breed from; | | |
| | | | 5 | no need for complex breeding programme; | | [3 max |
| | | | | | | [Total: 15 |
| | | | | | | |

| | | U | | GCE A/AS LEVEL – May/June 2008 | 9700 | 04 | | | | | |
| 4 | (a) | 1 | depo A in | | | | | | | | |
| | | 2 | in pr | in presynaptic <u>membrane</u> ; | | | | | | | |
| | | 3 | calc | calcium ions enter, synaptic knob / through presynaptic membrane; | | | | | | | |
| | | 4 | vesi | vesicles of, acetylcholine / neurotransmitter; | | | | | | | |
| | | 5 | fuse | with presynaptic membrane ; | | | | | | | |
| | | 6 | emp | ty contents into synaptic cleft / exocytosis ; | | [3 max] | | | | | |
| | (b) | (i) | 1 | fluorescence, more / higher, in sperm from wild type n | nice / ora ; | | | | | | |
| | | | 2 | comparative figures ; e.g. 170 v 10 and 400 v 10 | | | | | | | |
| | | | 3 | mutant sperm do not have P / ora ; | | | | | | | |
| | | | 4 | so cannot take up calcium ions / ora ; | | [3 max] | | | | | |
| | | (ii) | 1 | an heads ; | | | | | | | |
| | | | 2 | more P in flagellum than head ; | | | | | | | |
| | | | 3 | flagella take up more calcium ions ; | | | | | | | |
| | | | 4 | flagellum has larger surface area / ora ; | | | | | | | |
| | | | 5 | no difference in heads and flagella of mutant mice spe | erm since no P ; | [3 max] | | | | | |
| | (c) | (i) | fertil | isation, in glass / in a dish ; R "test tube baby" unex | plained | | | | | | |
| | | | outs | ide the reproductive tract / outside the body; | | [2] | | | | | |
| | | (ii) | with | | | | | | | | |
| | | | | few / no, mutant sperm penetrate zona pellucida / ora | ; | | | | | | |
| | | | | lack of calcium ions / ora ; | | | | | | | |
| | | | 3 | no / less, vigorous movement (of flagellum) / ora ; | | | | | | | |
| | | | | out ZP | | | | | | | |
| | | | | mutant sperm can penetrate oocytes (without ZP); | | | | | | | |
| | | | | differences in penetration less significant between wild | | | | | | | |
| | | | | flagellum movement not needed for penetration (of oo | | | | | | | |
| | | | | AVP ; e.g. smaller % success of wild-type sperm with with wild with ZP because, lack of binding site / damaged | | ZP compared [4 max] | | | | | |

(c) $1 - X^{R}X^{r} / Rr$;

 $4 - X^{R}Y / R / R^{\circ} / R$ -;

 $6 - X^{r}Y / r / r^{\circ} / r$ -;

$$7 - X^{R}X^{r} / Rr;$$

if X and Y not used then mark to max 3

[Total:8]

[4]

7 (a) (i) ref. wavelength

- 1 chlorophyll **a** peaks at <u>430</u>nm **and** chlorophyll **b** peaks at <u>450</u>nm ;
- 2 chlorophyll **a** peaks at <u>660</u>nm **and** chlorophyll **b** peaks at 635–640nm ;
- 3 ref. linking 400–500nm with blue light / ref. linking 600–700nm with red light ;
- 4 (both have) little absorption, between 500–600nm / in green light;
 A little absorption, chlorophyll a 450–600 and chlorophyll b 500–600;
- ref. light absorption
- 5 (both) peaks in blue light are higher than peaks in red light;
- 6 chlorophyll **b** higher than chlorophyll **a** in the blue end / chlorophyll **a** higher than chlorophyll **b** in the red end / AW ; **A** converse
- 7 comparative figures for light absorption to illustrate points 5 or 6; [3 max]

ignore units

- (ii) 1 absorbed light used for photosynthesis;
 - 2 higher rate of photosynthesis in red and blue light;
 - 3 action peak(s) / high rate of photosynthesis, correspond to absorption peak(s) ;
 - 4 blue / shorter wavelength, light has more energy / ora;
 - 5 not an exact match between absorption and action spectra (in middle region);
 - 6 role of carotenoids / accessory pigments, (in middle region); [3 max]
- (iii) they contain chlorophyll;

green / blue green / yellow green, light reflected ; [2]

(b) W – label line to stroma;

Y – label line to, granum / intergranal membranes; [2]
