## MARK SCHEME for the May/June 2008 question paper

## 9701 CHEMISTRY

9701/04

Paper 4 (A2 Structured Questions), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2008 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Page 2		2	Mark Scheme	Syllabus	Paper
			GCE A/AS LEVEL – May/June 2008	9701	04
(a)	(i)	<b>A</b> is	Cl <sub>2</sub> /chlorine		[1]
		<b>B</b> is	NaC <i>l or</i> HC <i>l or</i> C <i>l</i> <sup>-</sup> [or words], etc.		[1]
		<b>C</b> is	salt bridge or KC1/KNO <sub>3</sub> , etc.		[1]
		D is	platinum/Pt		[1]
		E is	Fe <sup>2+</sup> + Fe <sup>3+</sup> or mixture of Fe(II) + Fe(III) salts		[1]
			tion of standard conditions ([ $Cl^{-}$ ] of 1 mol dm <sup>-3</sup> or $Cl_2$ a = 25°C/298 K)	at 1 atmos	[1]
	(ii)	Е <sup>е</sup> =	$E_{R}^{o} - E_{L}^{o} = 0.77 - 1.36 = (-)0.59$ (V) (ignore sign)		[1]
			e R.H. electrode is negative) electrons flow (from ri trode <i>or</i> anticlockwise <i>or</i> from (beaker) <b>E</b> to (beaker) <b>B</b>		to the chlorine [1]
(b)	) (i)	:	= 3 ×(–167.2) + (–48.5) – (–399.5) = <b>–150.6</b> or <b>151</b> (kJ mol <sup>-1</sup> ) rect ans [2])		[1] [1]
	(ii)		$^{+}$ + Cu $\longrightarrow$ 2Fe <sup>2+</sup> + Cu <sup>2+</sup> nolecular: 2FeC $l_3$ + Cu $\longrightarrow$ 2FeC $l_2$ + CuC $l_2$ )		[1]
			0.77 – 0.34 = (+) <b>0.43</b> (V) mark for –0.43V)		[1]
					[Total: 12 max
(a)	(i)	:	= 4 × 278 – 244 – 2 × 496 = <b>–124</b> (kJ mol <sup>–1</sup> ) rect ans [2])		[1] [1]
	(ii)	due	be is bent/V-shaped/non-linear ( <i>or</i> diagram) to (one) lone pair <i>and/or</i> (1) odd/unpaired electron ( <i>or</i> s	• •	[1] [1]

(assume electrons are on chlorine unless explicitly stated otherwise, in which case award no mark)

(iii)	3KC1O <sub>3</sub> + H <sub>2</sub> SO <sub>4</sub>	$\rightarrow K_2SO_4 + KC_1O_4 + H_2O + 2C_1O_2$	[1] <b>[5</b> ]	]
-------	---	--	-----------------	---

- - (ii) causes acid rain [1] which lower pH of lakes; leaches aluminium from soils; kills fish/plants/rainforests; dissolves/corrodes/damages buildings (any 1) [1] (NOT asthma etc – since this is not environmental) [3]

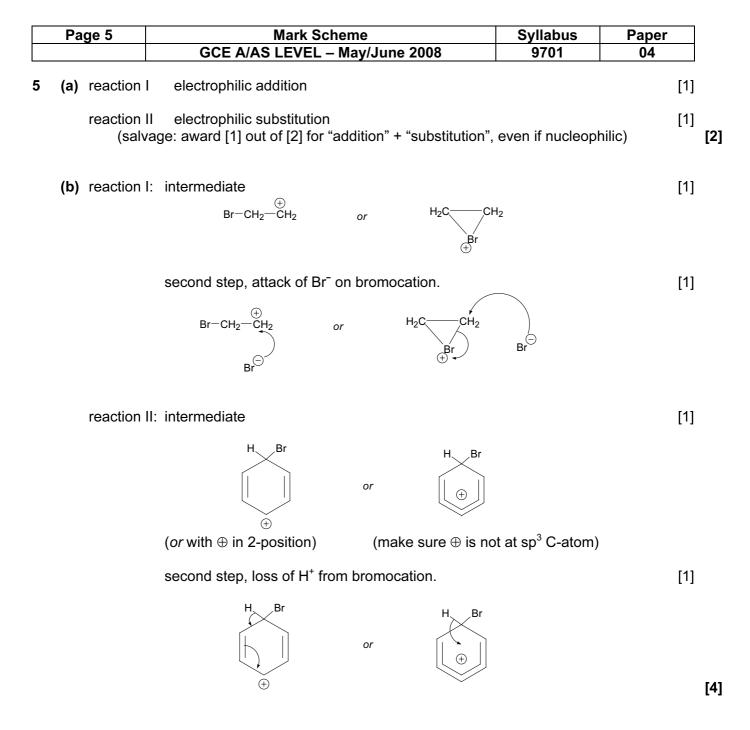

Page 3		;	Mark Scheme	Syllabus	Paper		
			GCE A/AS LEVEL – May/June 2008	9701	04		
	(c)	(i)	SiO <sub>2</sub> SnO	: simple + molecular/covalent <i>or</i> weak intermolecular fo : giant/macro + molecular/covalent p <sub>2</sub> : ionic/electrovalent (ignore "giant") prrect = [1], 1 correct = [0])		ll 3 correct) [2]	
		(ii)		$P_2$ is stable, PbO <sub>2</sub> is not <i>or</i> SnO <sub>2</sub> is the more stable $P_2 \longrightarrow PbO + \frac{1}{2}O_2$		[1] [1]	
		(iii)	_	+ $CO_2 (=) H^+ + HCO_3^-$ [H <sup>+</sup> ][HCO_3 <sup>-</sup> ]/[H <sub>2</sub> O][CO <sub>2</sub> ] or = [H <sup>+</sup> ][HCO <sub>3</sub> <sup>-</sup> ]/[CO <sub>2</sub> ]		[1] ecf [1]	
		(iv) $HCO_3^- + H^+ \longrightarrow H_2CO_3 \text{ or } H_2O + CO_2 \text{ (or equation with } H_3O^+\text{)} HCO_3^- + OH^- \longrightarrow CO_3^{2^-} + H_2O \text{ (NB NOT } H_2CO_3 + OH^- \rightarrow\text{)}$				[1] [1]	
			•	ds can substitute for one of the equations but no criptions are given, in the absence of at least one corr )		ward [1] mark	[8]
						[Total: 16 max 1	15]
3	(a)			ral diagram (either dashed+wedge, or similar represent	ation)	[1]	
			• •	all) 109° – 110° D] for part <b>(a)</b> if an angle of 90° or 180° is mentioned)		[1]	[2]
		(0.11				·	L-1
	(b)	vola	atility	decreases or boiling points increase			
				pt. $CC_4 > SiC_4$ but b.pt. increases thereafter)		[1]	
			•	reater van der Waals'/intermolecular forces or due to mo of "ions" negates this mark)	ore electrons	[1]	[2]
		(inc	maon				[~]
	(a)	(i)	Dh4+	/Pb²⁺: <i>E</i>		[both] [1]	
	(C)	(1)		lid comment about relative redox power <i>or</i> stability, e.g.	:	[both] [1]	
			(hen	ce) Sn <sup>2+</sup> easily oxidised or Sn <sup>4+</sup> is more stable than Sn <sup>2</sup>	+ or		
				is easily reduced <i>or</i> Pb <sup>2+</sup> is more stable than Pb <sup>4+</sup> <i>or</i> xidation state more stable down the group		[1]	
		(11)		$I + I_2 \longrightarrow Sn^{4+} + 2I^-$ + SO <sub>2</sub> + 2H <sub>2</sub> O $\longrightarrow 4H^+ + SO_4^{2-} + Pb^{2+}$		[1] [1]	
				$E$ no marks in (ii) for $E^{\circ}$ values)			[4]
	(d)	(i)	for S	Si: ∆H = 244 – 2(359) = <b>–474</b> (kJ mol <sup>–1</sup> )		[1]	
	. ,		for S	Sn: ∆H = 244 – 2(315) = <b>–386</b> (kJ mol <sup>−1</sup> )		[1]	
			(allo	w [1] out of [2] salvage mark for 474 & 386; 962 & 874;	or –962 & –874	1)	
		(ii)	Yes:	the +4 state becomes decreasingly stable – the $\Delta H$ is I	ess exothermic	: [1]	
			(mar	k is for relating $\Delta H$ s to stability: allow ecf from <b>d(i)</b> and a	also from <b>c(i)</b> )	I	[3]

10 (a) any two of the following:

- to speed delivery (of drug to target organ), i.e. faster response
- to avoid the drug being hydrolysed/reacted/decomposed (NOT digested) in the stomach
- to allow a smaller dose to be used or greater accuracy of dosage
- patient does not have to be conscious
- (b) (i) spheres with a diameter of the order of nanometres/in the nanometre range/between 10 & 500 nm [1]
  - (ii) it is (highly) acidic *or* low pH *or* contains HC*l* (NOT contains enzymes) [1]
  - (iii) use hydrogels: of different (wall) thickness/strength (to release drug over time) of different chemical composition (for different breakdown times) incorporating pores/holes (in their walls)
     (any two) [1] + [1]

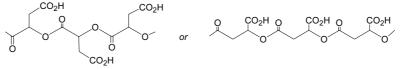

[4]

2 × [1] [2]

(c) for the homopolymer, either using the amino acid the minimum is:

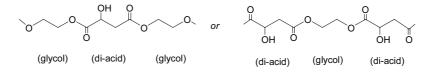

## -CO-CHR-NH-CO-CHR-NH-

or using the hydroxyacid the minimum is:

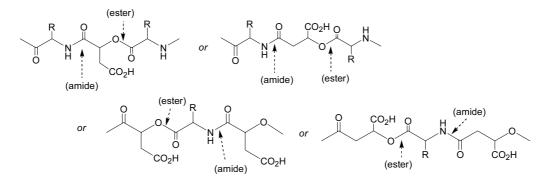

(-[1] for each error) [2]

for the **heteropolymer**, *either* using the glycol compound and the di-acid the minimum is:

or using the amino acid and the di-acid, the minimum is:

(A heteropolymer incorporating all three monomers can also be drawn. This should include an ester linkage between the glycol and one of the  $CO_2H$  groups, and an amide linkage between the aminoacid and another  $CO_2H$  group. Deduct [1] mark from the whole of section (c) if complete compounds are shown rather than sections of chains. Allow 4-monomer sections instead of 3. Allow [2] marks for a polymer section even if **one** end is incomplete (e.g. is lacking an oxygen atom), but if **both** ends are incomplete deduct [1]) (-[1] for each error) [2] [4]

## [Total: 10 max 9]
