MARK SCHEME for the October/November 2010 question paper

for the guidance of teachers

9702 PHYSICS

9702/51

Paper 5 (Planning, Analysis and Evaluation), maximum raw mark 30

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2010 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

UNIVERSITY of CAMBRIDGE International Examinations

	GCE A/AS LEVEL – October/November 2010	9702	51
Planning (15	marks)		
Defining the	problem (3 marks)		
	dependent variable and V is the dependent variable o	r vary <i>f</i> and mea	sure V [
	<u>current</u> in coil X <u>constant</u>		[
	number of turns on coil (Y)/area of coil Y constant		_
Do not cr	edit reference to coil X only.		[
Methods of c	lata collection (5 marks)		
	pendent coils labelled X and Y.		[
	ig power supply/signal generator connected to coil X i	n a workable circ	-
	nnected to voltmeter/c.r.o. in a workable circuit.		[
	. to determine period/frequency or read off signal gene		
	o keep <u>current</u> constant in coil X: adjust signal genera	lonuse of meosi	at.
	alysis (2 marks)		
	ph of V against f.		
A2 Relations	hip valid if straight line <u>through origin</u>		I
	derations (1 mark)		
	e to hot coils – switch off when not in use/use gloves	/do not touch co	
to hot coi	ls.		[
Additional de	etail (4 marks)		
D1/2/3/4 Rele	vant points might include		[
1. Use	large current in coil X/large number of coils on coil Y (to increase emf)	
2. Use	iron core (to increase emf).		
	il on measuring emf e.g. height × <i>y</i> -gain.		
	d other <u>alternating</u> magnetic fields.		
	il on measuring frequency from c.r.o. to determine pe		
	of ammeter/c.r.o. and resistor to check current is cons	stant	
7. Use	insulated wire for coils.		
	o coil Y and coil X in the same relative positions.		

[Total: 15]

	GCE A/AS LEVEL – October/November 2010	9702	51

2 Analysis, conclusions and evaluation (15 marks)

Part	Mark	Expected Answer	Additional Guidance
(a)	A1	Gradient = <i>b</i> <i>y</i> -intercept = lg <i>a</i>	Allow log <i>a</i> but not ln <i>a</i>
(b)	T1 T2	1.97770.292 or 0.29231.92940.265 or 0.26481.87510.241 or 0.24051.81290.210 or 0.20951.74040.170 or 0.17031.65320.127 or 0.1271	T1 for lg <i>l</i> column – ignore rounding errors; min 2 dp. T2 for lg <i>T</i> column – must be values given A mixture is allowed
	U1	From \pm 0.004 or \pm 0.005 to \pm 0.006 or \pm 0.007	Allow more than one significant figure.
(c) (i)	G1	Six points plotted correctly	Must be within half a small square; penalise \geq half a small square. Penalise 'blobs' \geq half a small square. Ecf allowed from table.
	U2	Error bars in lg (<i>T</i> /s) plotted correctly.	All error bars must be plotted. Check first and last point. Must be accurate within half a small square; penalise \geq half a small square.
(ii)	G2	Line of best fit	If points are plotted correctly then lower end of line should pass between (1.65, 0.124) and (1.65, 0.128) and upper end of line should pass between (2.00, 0.300) and (2.00, 0.306). Allow ecf from points plotted incorrectly; five trend plots needed – examiner judgement.
	G3	Worst acceptable straight line. Steepest or shallowest possible line that passes through <u>all</u> the error bars.	Line should be clearly labelled or dashed. Should pass from top of top error bar to bottom of bottom error bar or bottom of top error bar to top of bottom error bar. Mark scored only if all error bars are plotted.
(iii)	C1	Gradient of best fit line	The triangle used should be at least half the length of the drawn line. Check the read offs. Work to half a small square; penalise \geq half a small square.
	U3	Uncertainty in gradient	Method of determining absolute uncertainty Difference in worst gradient and gradient.
(iv)	C2	<i>y</i> -intercept	Must be negative. Check substitution of point from line into $c = y - mx$. Allow ecf from (c)(iii).

Page 4	Mark Scheme: Teachers' version	Syllabus	Paper
	GCE A/AS LEVEL – October/November 2010	9702	51

	U4	Uncertainty in <i>y</i> -intercept	Method of determining absolute uncertainty Difference in worst <i>y</i> -intercept and <i>y</i> -intercept. Do not allow ecf from false origin read-off (FOX). Allow ecf from (c)(iv) .
(d)	C3	$a = 10^{y-\text{intercept}}$	<i>y</i> -intercept must be used. Expect an answer of about 0.19. If FOX expect answer of about 1.3.
	C4	<i>b</i> = gradient <u>and</u> in the range 0.495 to 0.520 <u>and</u> to 2 or 3 sf	Allow 0.50 to 0.52 to 2 sf Penalise 1 sf or ≥4 sf
	U5	Absolute uncertainty in <i>a</i> and <i>b</i>	Difference in <i>a</i> and worst <i>a</i> . Uncertainty in <i>b</i> should be the same as the uncertainty in the gradient.

[Total: 15]

Uncertainties in Question 2

(c) (iii) Gradient [U3]

- Uncertainty = gradient of line of best fit gradient of worst acceptable line 1.
- 2. Uncertainty = 1/2 (steepest worst line gradient – shallowest worst line gradient)

(c) (iv) [U4]

- 1. Uncertainty = y-intercept of line of best fit y-intercept of worst acceptable line
- 2. Uncertainty = $\frac{1}{2}$ (y-intercept of steepest worst line – y-intercept of shallowest worst line)

(d) [U5] 1. Uncertainty = 10 ^{best y-intercept} - 10 ^{worst y-intercept}
