## MARK SCHEME for the May/June 2010 question paper

## for the guidance of teachers

## 9702 PHYSICS

9702/35 Paper 31 (Advanced Practical Skills), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2010 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

UNIVERSITY of CAMBRIDGE International Examinations

	GCE AS/A LEVEL – May/June 2010	9702	35

## (g)

	Limitations (4)	Improvements (4)	Ignore
Α	<b>A</b> <sub>p</sub> Two readings not enough (to support conclusion) / too few readings.	<b>A</b> <sub>s</sub> Take more (sets of) readings <u>and</u> plot a graph / compare values of <i>k</i> .	Repeat readings
В	<b>B</b> <sub>p</sub> Marker never exactly on 2 cm or 0.5 cm: either above or below / increments in changes in amplitude too large / difficult to judge 2 cm and 0.5 cm.	<b>B</b> <sub>s</sub> Video with timer (playback) in slow motion / position sensor above with data logger / measure the amplitudes over time.	Use computer to improve the experiment. Multi-flash photography? Light gates.
С	<b>C</b> <sub>p</sub> Straw not vertical (straight) / straw bumping into sides/ non-vertical oscillation.	<b>C</b> <sub>s</sub> Wider container / glue straw / method of alignment.	No ref to changing oil
D	<b>D</b> <sub>p</sub> Difficult to measure ' <i>d</i> ' because of lining up meniscus / refraction of curved container.	<b>D</b> <sub>s</sub> Mark straw/ mark container / use travelling microscope / vernier calliper?	
E	<b>E</b> <sub>p</sub> Difficult to measure time because moves past the marker quickly / small distances involved.	<b>E</b> <sub>s</sub> Video with timer (playback) in slow motion / position sensor above with data logger. Credit once only.
