## UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Subsidiary Level and GCE Advanced Level

## MARK SCHEME for the May/June 2010 question paper for the guidance of teachers

## 9702 PHYSICS

9702/33

Paper 31 (Advanced Practical Skills), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2010 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

				GCE AS/A LEVEL – May/June 2010	9702	33		
1	(c)	Indic	cate t	of readings of $I$ and $V$ scores 5 marks, five sets scores the number of sets of readings. trend $-1$ (wrong trend is $I$ increases, $V^{10}$ decreases).	s 4 marks, etc.	[5]		
		Appa	aratu	is correctly setup without help from supervisor.		[2]		
		Ran	ge of	f $I$ : $I_{min} \leqslant$ 10 mA and $I_{max} \geqslant$ 35 mA. Ignore POT errors	S.	[1]		
		Column headings (e.g. $VV$ , $I/A$ , $V^{10}V^{10}$ ). [1] Must have $V$ and $I$ columns. Each column heading must contain a quantity and a unit where appropriate. Ignore units in the body of the table. There must be some distinguishing mark between the quantity and the unit. (solidus is expected but accept, for example, $V(V)$ )						
		Consistency of presentation of $\underline{\text{raw}}$ readings. [1] All values of $V$ must be given to the same number of decimal places (must have dp). All values of $I$ must be given to the same number of decimal places.						
		Significant figures. Sf for $V^{10}$ must be the same as or one more than the sf used in $V$ . Check each row.						
				f $V^{10}$ correct. Underline and check the specified value ct, write in the correct value.	of <i>V</i> <sup>10</sup> .	[1]		
	(d)	(d) Graph						
		•	Scal both Scal Allov	sible scales must be used. Awkward scales (e.g. 3:10) les must be chosen so that the plotted points occupy a x and y directions. Indicate false origin with FO. les must be labelled with the quantity that is being plott w inverted axes but do not allow the wrong graph. The markings should be no more than three large square	at least half the	e graph grid in		
			Write Do n Ring	s bservations must be plotted. e a ringed total of plotted points. not accept blobs (points > 0.5 small square). g and check a suspect plot. Tick if correct. Re-plot if ir k to an accuracy of half a small square.	ncorrect.	[1]		
		` ,	Judg Ther lengt	of best fit ge by balance of at least 5 trend points about the cand re must be an even distribution of points either side th. Indicate best line if candidate's line is not the best s must not be kinked.	e of the line alo	[1] ong the whole		
			All p	lity ge by scatter of all points about a straight line. oints in table (minimum 5) must be within 2 mA of a st not award if wrong graph or wrong trend.	raight line.	[1]

				GCE AS/A LEVEL – May/June 2010	9702	33
	T B If		Both If inc	dient hypotenuse of the triangle must be at least half the ler read-offs must be accurate to half a small square. correct, write in correct value. ck for $\Delta y/\Delta x$ (i.e. do not allow $\Delta x/\Delta y$ ).	gth of the drawn	line. [1]
			-	ercept from graph or substitute correct read-offs into <i>y</i> el FO.	= mx + c	[1]
	` '	If in	verte	ent value and $b = y$ -intercept value. d axes not corrected for $-1$		[1]
		Rar	ige of	f values $(0.1\text{AV}^{-10} \le a \le 0.9\text{AV}^{-10}, b = 0 \pm 0.01\text{A})$ and	appropriate units	[1]
						[Total: 20]
2	(a)	Rav	v valu	ue(s) of x: $25.0 \text{ cm} \le x \le 35.0 \text{ cm}$ with unit to nearest	mm.	[1]
	(b)	(i)	Valu	ence of repeated measurements of $d$ in <b>(b)(i)</b> or <b>(e)</b> the of $d = 3.0 \text{ mm} \pm 1.0 \text{ mm}$ or SV $\pm 1.0 \text{ mm}$ values of $d$ to at least 0.1 mm		[1] [1]
	(	(ii)	Valu	e of <i>t</i> in range 1 s to 10 s unless SV indicates otherwis	se. Allow SV ± 5 s	s [1]
	` '	<ul> <li>(c) Absolute uncertainty in t<sub>1</sub> in the range 0.1 to 0.6 s If repeated readings have been taken, then the uncertainty could be half the rang Correct calculation to get % uncertainty.</li> <li>(d) v calculated correctly with consistent units.</li> </ul>		[1] ge.		
	(d)			[1]		
	<ul><li>(e) Second value for d.</li><li>Second value for t.</li><li>Quality: t<sub>2</sub> less than t<sub>1</sub>. (d increases, t decreases)</li></ul>				[1] [1] [1]	
	(f)	(i)	Calc	culation of two values of <i>k</i> .		[1]
	(	(ii)		d conclusion based on the calculated values. didate must test against a specified criterion.		[1]
	(i	iii)	Rela	te raw values of $x$ , $t$ and $d$ . Any decimal place argume	nts score zero.	[1]

Page 4	Mark Scheme: Teachers' version	Syllabus	Paper
	GCE AS/A LEVEL – May/June 2010	9702	33

	Limitations (4)	Improvements (4)	Ignore
Α	A <sub>p</sub> Two readings not enough (to support conclusion)/too few readings.	<b>A</b> <sub>s</sub> Take more (sets of) readings <u>and</u> plot a graph/compare values of k.	Repeat readings.
В	<b>B</b> <sub>p</sub> Time too short/reaction time large compared to measured time/parallax error in judging start/stop.	<b>B</b> <sub>s</sub> Increase x/lengthen tube/smaller balls/video with timer (playback) in slow motion.	Light gates, motion sensors, data loggers, computers, helpers, solution for parallax error. Set squares, rulers, etc.
С	<b>C</b> <sub>p</sub> Difficult to see glass balls.	<b>C</b> <sub>s</sub> Use coloured balls/shine light through.	Use ball bearings (type of ball and oil stays fixed).
D	<b>D</b> <sub>p</sub> Terminal velocity not reached (by the first marker).	<b>D</b> <sub>s</sub> A valid method to check reached TV, e.g. <u>time constant</u> over three markers/video with timer (playback) in slow motion, multi-flash photography/stroboscope.	References to starting point. Do not accept 'move x down' on its own. Change viscosity of oil (oil and glass must remain fixed).
E	E <sub>p</sub> Balls not all the same diameter/size/shape/mass	E <sub>s</sub> Use micrometer screwgauge/top pan balance	
X	X <sub>p</sub> Balls had a hole in/air bubbles on ball or oil.	X <sub>s</sub> Clean balls/immerse in oil	

[Total: 20]
