# MARK SCHEME for the June 2005 question paper 

## 9702 PHYSICS

9702/02
Paper 2 (Structured), maximum raw mark 60

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. This shows the basis on which Examiners were initially instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published Report on the Examination.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the Report on the Examination.

- CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the June 2005 question papers for most IGCSE and GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Grade thresholds for Syllabus 9702 (Physics) in the June 2005 examination.

|  | maximum | minimum mark required for grade: |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | mark <br> available | A | B | E |  |
| Component 2 | 60 | 43 | 39 | 26 |  |

The thresholds (minimum marks) for Grades $C$ and $D$ are normally set by dividing the mark range between the $B$ and the $E$ thresholds into three. For example, if the difference between the $B$ and the $E$ threshold is 24 marks, the $C$ threshold is set 8 marks below the $B$ threshold and the $D$ threshold is set another 8 marks down. If dividing the interval by three results in a fraction of a mark, then the threshold is normally rounded down.

## GCE A AND AS LEVEL

## MARK SCHEME

## MAXIMUM MARK: 60

## SYLLABUS/COMPONENT: 9702/02

PHYSICS
Paper 2 (Structured)

1 (a) allow $100 \mathrm{~m} \mathrm{~s}^{-1} \rightarrow 900 \mathrm{~m} \mathrm{~s}^{-1}$
(d) allow $2 \times 10^{3} \mathrm{~cm}^{3} \rightarrow 9 \times 10^{3} \mathrm{~cm}^{3}$
(a) speck of light
that moves haphazardly/randomly/jerkily/etc.
(b) randomness of collisions would be 'averaged out'
so less (haphazard) movement
(do not allow 'more massive so less movement')
3

4

4 (a) brittle
(b) (i) stress $=$ force/area

$$
\begin{aligned}
& =60 /\left(7.9 \times 10^{-7}\right) \\
& =7.6 \times 10^{7} \mathrm{~Pa}
\end{aligned}
$$

(ii) Young modulus $=$ stress/strain ..... C1
limiting strain $=0.03 / 24\left(=1.25 \times 10^{-3}\right)$ ..... C1
Young modulus $=\left(7.6 \times 10^{7}\right) /\left(1.25 \times 10^{-3}\right)=6.1 \times 10^{10} \mathrm{~Pa}$ ..... A1
(iii) energy $=1 / 2 \times 60 \times 3.0 \times 10^{-4}$ ..... C1

) energy $=1 / 2 \times 60 \times 3.0 \times 10^{-4}$

$$
=9.0 \times 10^{-3} \mathrm{~J}
$$

(c) If hard, ball does not deform (much) ..... B1
and either (all) kinetic energy converted to strain energy ..... B1 If soft, $E_{k}$ becomes strain energy of ball and window ..... B1 (no mention of strain energy, max 2 marks)

(c) If hard, ball does not deform (much)
and either (all) kinetic energy converted to strain energy
If soft, $E_{k}$ becomes strain energy of ball and win
(no mention of strain energy, max 2 marks)
or impulse for hard ball takes place over shorter time (B1)
larger force/greater stress (B1)

(c) If hard, ball does not deform (much)
and either (all) kinetic energy converted to strain energy
If soft, $E_{k}$ becomes strain energy of ball and win
(no mention of strain energy, max 2 marks)
or impulse for hard ball takes place over shorter time (B1)
larger force/greater stress (B1)
or $E_{k}$ before impact $>E_{k}$ after $/ E_{p}$ after
so must be inelastic collision
(allow 1 mark for 'bullet embeds itself in block' etc.)

B1
B1
B1 B1 B1
B1 B1 B1 C1 M1 A1

5 (a) When a wave (front) is incident on an edge or an obstacle/slit/gap
Wave 'bends' into the geometrical shadow/changes direction/spreads A1
(b) (i) $d=1 /\left(750 \times 10^{3}\right) \quad \mathrm{C} 1$
$=1.33 \times 10^{-6} \mathrm{~m}$ A1
(ii) $1.33 \times 10^{-6} \times \sin 90^{\circ}=n \times 590 \times 10^{-9}$ C1
$n=2$ (must be an integer) A1
(iii) formula assumes no path difference of light before entering grating or
there is a path difference before the grating
(c) e.g. lines further apart in second order
lines fainter in second order
(allow any sensible difference: 1 each, max 2) B2
(if differences stated but without reference to the orders, max 1 mark)
(a) (i) lines normal to plate and equal spacing (at least 4 lines) B1 direction from $(+)$ to earthed plate B1
(ii) $E=160 / 0.08$ M1

$$
=2.0 \times 10^{3} \mathrm{~V} \mathrm{~m}^{-1}
$$

AO
(b) (i) correct directions with line of action of arrows passing through charges
B1
(ii) force $=E q$
C1

$$
\begin{aligned}
& =2.0 \times 10^{3} \times 1.2 \times 10^{-15} \\
& =24 \times 10^{-12} \mathrm{~N}
\end{aligned}
$$

$$
=2.4 \times 10^{-12} \mathrm{~N}
$$

A1
(iii) couple $=$ force $\times$ perpendicular separation

$$
\begin{aligned}
& =2.4 \times 10^{-12} \times 2.5 \times 10^{-3} \times \sin 35^{\circ} \\
& =3.4(4) \times 10^{-15} \mathrm{~N} \mathrm{~m}
\end{aligned}
$$

(iv) either rotates to align with the field or oscillates (about a position) M1 with the positive charge nearer to the earthed plate/clockwise A1

7 (a) potential difference/current B1
(b) (i) 1) 1.13 W
2) 1.50 V
B1
(ii) power $=V^{2} / R$ or power $=V I$ and $V=I R$ C1

$$
\begin{aligned}
R & =1.50^{2} / 1.13 \\
& =1.99 \Omega
\end{aligned}
$$A1

| Page 3 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | A and AS LEVEL - June 2005 | 9702 | 2 |

(iii) either $E=I R+I r \quad$ or $\quad$ voltage divided between $R$ and $r \quad \mathrm{C} 1$ $\begin{array}{lll}l=1.5 / 2.0(=0.75 \mathrm{~A}) & \text { p.d. across } R=\text { p.d. Across } r=1.5 & \mathrm{C} 1 \\ 3.0=1.5+0.75 r & & \\ r=2.0 \Omega & \text { so } R=r=1.99 \Omega & \text { A1 }\end{array}$
$\begin{array}{lll}\text { (c) larger p.d. across } R \text { means smaller p.d. across } r & \text { M1 } \\ \text { smaller power dissipation at larger value of } V & \text { A1 } \\ \text { since power is } V I \text { and } I \text { is same for } R \text { and } r & \text { A1 }\end{array}$
$\begin{array}{lll}\text { (c) larger p.d. across } R \text { means smaller p.d. across } r & \text { M1 } \\ \text { smaller power dissipation at larger value of } V & \text { A1 } \\ \text { since power is } V I \text { and } I \text { is same for } R \text { and } r & \text { A1 }\end{array}$
$\begin{array}{lll}\text { (c) larger p.d. across } R \text { means smaller p.d. across } r & \text { M1 } \\ \text { smaller power dissipation at larger value of } V & \text { A1 } \\ \text { since power is } V I \text { and } I \text { is same for } R \text { and } r & \text { A1 }\end{array}$
8 (a) position shown as $A=227, Z=91$
B1
(b) Pu shown as $A=243, Z=94$

B1
(b) Pu shown as $A=243, Z=94$
D shown with $A=A_{\mathrm{Pu}}$ and with $Z=\left(Z_{\mathrm{Pu}}+1\right)$ B1
