Cambridge International Examinations<br>Cambridge International General Certificate of Secondary Education

## PHYSICS

0625/43
Paper 4 Extended Theory
October/November 2016
MARK SCHEME
Maximum Mark: 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.
Cambridge is publishing the mark schemes for the October/November 2016 series for most Cambridge IGCSE ${ }^{\circledR}$, Cambridge International A and AS Level components and some Cambridge O Level components.

## NOTES ABOUT MARK SCHEME SYMBOLS \& OTHER MATTERS

| M marks | are method marks upon which further marks depend. For an M mark to be <br> scored, the point to which it refers must be seen in a candidate's answer. If a <br> candidate fails to score a particular M mark, then none of the dependent marks <br> can be scored. |
| :--- | :--- |
| B marks | are independent marks, which do not depend on other marks. For a B mark to <br> scored, the point to which it refers must be seen specifically in the candidate's <br> answers. |
| A marks | In general A marks are awarded for final answers to numerical questions. <br> If a final numerical answer, eligible for A marks, is correct, with the correct unit <br> and an acceptable number of significant figures, all the marks for that question <br> are normally awarded. <br> It is very occasionally possible to arrive at a correct answer by an entirely wrong <br> approach. In these rare circumstances, do not award the A marks, but award C <br> marks on their merits. However, correct numerical answers with no working <br> shown gain all the marks available. |
| C marks | are compensatory marks in general applicable to numerical questions. These can <br> be scored even if the point to which they refer are not written down by the <br> candidate, provided subsequent working gives evidence that they must <br> have known it. For example, if an equation carries a C mark and the candidate <br> does not write down the actual equation but does correct substitution or working <br> which shows he knew the equation, then the C mark is scored |
| A C mark is not awarded if a candidate makes two points which contradict each |  |
| other. Points which are wrong but irrelevant are ignored. |  |

| Page 3 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | Cambridge IGCSE - October/November 2016 | 0625 | 43 |

| Ignore | Indicates that something which is not correct or irrelevant is to be disregarded <br> and does not cause a right plus wrong penalty. |
| :--- | :--- |
| ecf | meaning "error carried forward" is mainly applicable to numerical questions, but <br> may in particular circumstances be applied in non-numerical questions. <br> This indicates that if a candidate has made an earlier mistake and has carried an <br> incorrect value forward to subsequent stages of working, marks indicated by ecf <br> may be awarded, provided the subsequent working is correct, bearing in mind the <br> earlier mistake. This prevents a candidate being penalised more than once for a <br> particular mistake, but only applies to marks annotated ecf. |
| Sig. figs | Answers are normally acceptable to any number of significant figures $\geqslant 2$. Any <br> exceptions to this general rule will be specified in the mark scheme. In general, <br> accept numerical answers, which, if reduced to two significant figures, would be <br> right. |
| Units | Deduct one mark for each incorrect or missing unit from an answer that would <br> otherwise gain all the marks available for that answer: maximum 1 per <br> question. No deduction is incurred if the unit is missing from the final answer but <br> is shown correctly in the working. |
| Arithmetic errors | Deduct one mark if the only error in arriving at a final answer is clearly an <br> arithmetic one. |
| Transcription | Deduct one mark if the only error in arriving at a final answer is because given or <br> errors previously calculated data has clearly been misread but used correctly.. |
| Fractions | e.g. $1 / 2,1 / 4,1 / 10$ etc are only acceptable where specified. |
| Crossed out workWork which has been crossed out and not replaced but can easily be read, <br> should be marked as if it had not been crossed out. |  |
| Use of NR $\quad$(\# key on the keyboard). Use this if the answer space for a question is completely <br> blank or contains no readable words, figures or symbols. |  |
