READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.Write in dark blue or black pen.You may use a soft pencil for any diagrams, graphs or rough working.Do not use staples, paper clips, highlighters, glue or correction fluid.DO **NOT** WRITE ON ANY BARCODES.

Answer **all** questions. The Insert contains Figs 1 and 3 for Question 1, and Tables 3 and 4 for Question 2.

The Insert is **not** required by the Examiner.

Sketch maps and diagrams should be drawn whenever they serve to illustrate an answer.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 14 printed pages and 2 blank pages, and 1 Insert.

[Turn over

1 A group of students was investigating the characteristics of local streams and rivers. They decided to do fieldwork at three sites which are shown on Fig. 1 (Insert).

The two hypotheses used by the students were:

Hypothesis 1: Width, depth and wetted perimeter of the river channel increase downstream.

Hypothesis 2: There is a relationship between the size and the roundness of pebbles on the river bed.

- (a) Before beginning their fieldwork the students received advice from their teacher.
 - (i) Suggest **three** pieces of advice their teacher gave them to keep them safe whilst carrying out fieldwork.

For

Examiner's Use (b) To investigate **Hypothesis 1**, the students made two measurements at each site. They measured the width of the river channel and the depth of the river at points across the channel.

3

For Examiner's Use

Suggest what equipment they would use to measure the width of the channel and the depth of the river and how they would make the measurements.

Width of channel
Depth of river
[4]
[1]

(c) The results of their measurements are shown in Table 1, below.

Table 1

Channel measurements

			Depth of river at distances across the channel (m)											
Site	Width of channel (m)	0.5	1.0	1.5	2.0	2.5	3.0	3.5	4.0	4.5	5.0	5.5	6.0	Wetted perimeter (m)
A	1.3	0.15	0.1											1.4
В	2.3	0.14	0.18	0.33	0.2									2.5
С	6.5	0.2	0.26	0.29	0.3	0.33	0.38	0.47	0.48	0.51	0.36	0.35	0.26	

(ii) The wetted perimeter (the part of the channel cross-section which the river touches) is labelled on Fig. 2 at Site C. Measure the length of the wetted perimeter at this site.

For Examiner's Use

	metres [2]
(iii)	How and why will the speed of river flow be affected by contact with the river channel?
	[2]
(iv)	The students made the conclusion that Hypothesis 1 : <i>Width, depth and wetted perimeter of the river channel increase downstream</i> was correct. How would you use their results to support this conclusion?
	[2]

- (d) Next the students made some measurements to investigate **Hypothesis 2**: There is a relationship between the size and the roundness of pebbles on the river bed.
 - (i) At each site (A, B and C) a student selected 10 pebbles at random from the bed of the river. He then measured the size and roundness of the pebbles using the equipment shown in Fig. 3 (Insert). Suggest how he made the two measurements.

The results of the student's work are shown in Table 2 below.

Table 2

Site	А	В	С
Average (mean) pebble size (cm)	12	9	7.5
Average roundness score	2	3.5	4

(ii) Plot the average pebble size and roundness score for Site B on Fig. 4 below. [2]

Pebble Measurements

For

Examiner's Use

(iii) What conclusion would the students make about Hypothesis 2: There is a For relationship between the size and the roundness of pebbles on the river bed? Examiner's Use (iv) Suggest why pebble size and roundness change downstream. (e) Suggest four ways that the students could have improved their data collection methods to make their results for both hypotheses more reliable. 1 2..... 3..... 4.....[4] [Total: 30 marks]

BLANK PAGE

2 A group of students was studying traffic flows in and out of the centre of a town. A map of the area being studied is shown in Fig. 5 below.

Number of Vehicles at each site

The students wanted to investigate the following hypotheses:

Hypothesis 1: The amount of traffic will be less further from the town centre.

Hypothesis 2: The amount of traffic going towards and going away from the town centre will change during the day.

For

Examiner's Use The students chose eight sites to do traffic surveys at 08.00 and 17.00. These are shown on Fig. 5.

- For Examiner's Use
- (a) (i) Suggest four things the students would need to do to plan for their traffic count.

(ii) The students agreed to use a tally method to record vehicles passing each survey point. Give **two** reasons why this is a suitable recording method.

1	 	 	
2			
۷	 	 	

0460/43/O/N/11

Traffic flows at 08.00

12

The students plotted flow lines to show their results at sites 2, 4, 6 and 8. Fig. 6

below shows the traffic flows at 08.00, and Fig. 7 on page 13 shows the traffic flows

Fig. 6

(ii)

at 17.00.

Use the data from Table 4 (Insert) to draw two flow lines on Fig. 6 (page 12) to show the number of vehicles travelling along Queens Road at **08.00**. [2]

(iii) Use the data in Table 4 to complete below the rank order of the number of vehicles at 08.00. Write in the names of the three roads in the table below.

Rank	Name of road
Highest ≜	Cambridge Road
Lowest	

[1]

What conclusion would the students make about Hypothesis 2: The amount of (iv) For traffic going towards and going away from the town centre will change during the Examiner's Use day? Use evidence from Table 4 and Figs 6 and 7 to support your answer. (d) Suggest three improvements to the data collection methods used in the students' investigation. 1..... 2..... 3.....[3] (e) Robertson Drive and Wellington Drive provide access to a popular beach. How and why might this cause traffic flow to vary?

Use (i) Suggest a suitable hypothesis. (ii) Complete the questionnaire, Fig. 8, below, with three questions which the student could ask to test her hypothesis. The first part of the questionnaire has been done for you. [3] Traffic-free zone questionnaire Questionnaire As part of my Geography coursework, I am doing an investigation into the traffic-free zone of the town centre. Please answer the following questions. Male Female Under 20 l 36 - 50 20 - 35 Age: 51 - 65 Over 65 Question 1. Question 2. Question 3. Thank you for your time. Fig. 8

[Total: 30 marks]

For

Examiner's

people had about the traffic-free zone in the centre of the town.

To extend her fieldwork one student decided to do an investigation into what opinions
