## **CAMBRIDGE INTERNATIONAL EXAMINATIONS**

**International General Certificate of Secondary Education** 

## MARK SCHEME for the May/June 2014 series

## 0620 CHEMISTRY

0620/21

Paper 2 (Core Theory), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Page 2		2	Mark Scheme	Syllabus	Paper
		IGCSE – May/June 2014 0620			21
(a)	(i)		nesium / Mg w: methane / CH₄		[1]
	(ii)	hydr	rogen / H <sub>2</sub>		[1]
	(iii)	carb	oon monoxide / CO		[1]
	(iv)	copp	per / Cu		[1]
	(v) calcium oxide / CaO; allow: carbon dioxide / CO <sub>2</sub>			[1]	
(b) 1 mark for each correct word: seven; trend; density / colour;					
	sod	lium.			[4]
					[Total: 9]
(a)	•	electi electi positi no nu	re points (1 mark each) e.g. rons random / electrons not in shells ORA e.g. ele rons are negatively charged ORA ive charge spread out / diffuse charge ORA e.g. p	protons have + charge	[3]
	•	по рг	rotons / no neutrons / no nucleons / no nuclear pa	ITTICIES ORA	
(b)	(i)	diffe num	rent number of neutrons / different mass number	ber / different nucleon	[1]
	(ii)	•	suitable use e.g. energy production / nuclear power / power station measuring thickness of paper finding cracks in pipelines / pipes smoke alarms	าร	[1]
(c)			point any value between 120–200 (°C) adius any value between 0.220 and 0.240 (nm)		[1] [1]
(d)	(i)		um hydroxide; rogen		[1] [1]
	(ii)	pH 1	13		[1]
(e)			on in outer shell; ells correct i.e. 2, 8, 8		[1] [1]
					[Total: 12]

	Page 3			Mark Scheme	Syllabus	Paper
				IGCSE – May/June 2014	0620	21
3	(a) the more			e (carbon) atoms, the higher the boiling point		[1]
	(b)	Any <b>two</b> from: <ul> <li>naphtha</li> <li>lubricating (oil) / lubricant</li> <li>bitumen</li> </ul>				[2]
	(c)	(i) correct structure of ethane showing all atoms and bonds;				
		. ,	<ul><li>(ii) 2 inner shell electrons for C;</li><li>4 bonding pairs of electrons representing each C–H bond;</li></ul>		[1] [1]	
	(d)	(i)	(i) C <sub>3</sub> H <sub>6</sub>			
		(ii) heat / high temperature; ALLOW: quoted temperature values between 300-800°C ALLOW: high pressure				[1]
						[Total: 8]
4	(a)	•	<ul> <li>atoms slow down during condensation / move less than before</li> <li>atoms become less randomly arranged / less irregularly arranged during condensation / atoms get closer together in condensation</li> <li>atoms in liquid are irregularly arranged / close together / touching</li> <li>atoms in liquids slide over each other / atoms in liquids move slowly</li> <li>atoms slow down (further) during freezing</li> <li>atoms become more regularly arranged during freezing</li> <li>atoms in solid only vibrate</li> </ul>		[4]	
	(b)	4 / fo	our			[1]
	(c)	Any physical property e.g. malleable / ductile / conduct heat / conduct electricity / conducts (unqualified) / silvery / shiny / sonorous ALLOW: high melting point / high boiling point / solid at room temperature IGNORE: reference to density / hardness				
	(d)	silver < tin < iron < magnesium 1 mark if 1 pair inverted / magnesium > iron > tin > silver				

Page 4			Mark Scheme Syllabus		Paper				
		<i>(</i> 1)	0 (0	IGCSE – May/June 2014	0620	21			
	(e)	(1)	2 (CO); 2 (C) dependent on 2CO being correct;	[1] [1]					
			[1]						
						[Total: 11]			
5	(a)			correctly (on either left or right top pipes at base of a correctly on one of the two pipes at the top	furnace)	[1] [1]			
	(b)	hen	ematite						
	(c)		i) heat given off / energy given out						
		(ii)	turns	water; s milky / turns cloudy / white precipitate; e: second mark dependent on first being correct		[1] [1]			
	(d)	iron	oxide	e is losing oxygen / CO is gaining oxygen		[1]			
						[Total: 7]			
6	(a)	ring	arou	nd the OH group only		[1]			
	(b)	(i)		eft) sugar / glucose / any other suitable sugar; ight) carbon dioxide;		[1] [1]			
		(ii)	enzymes;						
	(c) C		$H_4$						
	(d)			s up to a maximum / increases up to given figure a peak;	e between 35-40°C /	[1]			
	(e)	(i)		sity) increases as the number of carbon atoms incre w: decreases as the number of C atoms gets lower	eases;	[1]			
		(ii)	prop	anol;		[1]			
		(iii)	liquid because its melting point is below room temperature and boiling point is above room temperature / becomes liquid at -79°C (and does not become a) gas until 138°C / room temperature is between the boiling point and melting point (room temperatures for last answer can be between 5 and						
			40°C)						
						[Total: 10]			

	Page 5			Mark Scheme	Syllabus	Paper		
				IGCSE – May/June 2014	0620	21		
7	(a)	squ <b>not</b>	;	[1]				
		solvent at bottom of tank with paper dipping into it;  note: solvent does not have to be labelled / paper can just touch the surface But there should be no gap between the solvent and the paper watchglass over the tank (this can just be shown as a line);						
	(b)	plac <b>not</b>	[1]					
		abo	[1]					
		let the solvent run up the paper / solvent moves the dyes up the paper / son idea that solvent is needed for the movement of the spots;						
	(c)	any suitable solvent e.g. ethanol / butanol / ester / alcohol						
	(d)	(i) W, X and Y;				[1]		
		(ii) 4 / four;			[1]			
	(e)	(i)		that ethene is the monomer / idea that monome c) units which add together;	ers are the simple (d	or [1]		
			addi	that poly(ethene) is the polymer / idea that the polymer is a very long (hydrocarbon) chain;				
		note: (ethene) monomers join to make a polymer = 2 marks		arks				
		(ii)	<u>mixt</u>	ure of metals / mixture of metal + non metal;		[1]		
	(f)	(i) increasing strength decreases (thermal) conductivity / the lower conductivity the higher the strength;		ity / the lower th	e [1]			
		(ii) high strength aluminium;			[1]			
		has high strength / it is strong / aircraft body need to be strong;		strong;	[1]			
		it has low density / it is light(weight) / aircraft body needs to be light(weight)			[1]			
						[Total: 16]		
8	(a)	(i)	2 (S	O <sub>2</sub> );		[1]		

3 (O<sub>2</sub>);

[1]

•		IGCSE – May/June 2014	0620	21				
(ii)	(ii) causes acid rain / it is acidic / it acidifies (something);							
	erodes (limestone) buildings / erodes mortar / corrodes metalwork / corrodes bridges / erodes named carbonate rock							
(b) filtration / filtered								
(c) (i)	cathode;			[1]				
(ii)	ast / 4th box	ticked (zinc at negative electrode	and O <sub>2</sub> at positive electroo	le); [1]				
				[Total: 7]
