BIOLOGY

Paper 3 Extended

October/November 2011

1 hour 15 minutes

0610/31

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams or graphs.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

| For Exam | iner's Use |

This document consists of 19 printed pages and 1 blank page.

1 Fig. 1.1 shows a flowering shoot of tiger lily, *Lilium tigrinum*.

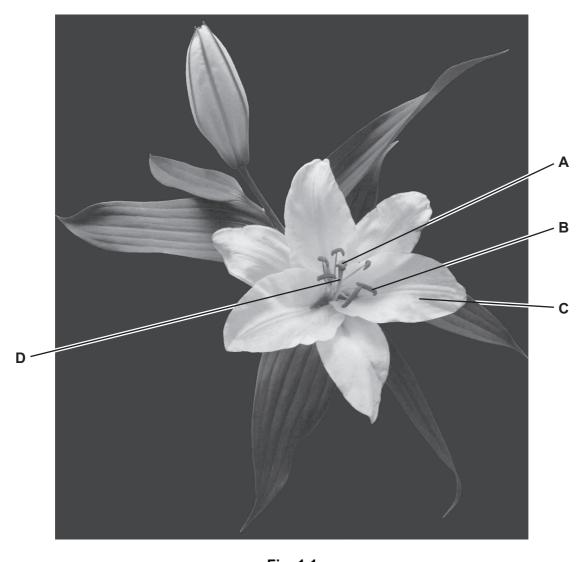

Fig. 1.1

| | | [1] |
|-----|--|-----|
| (b) | Name the parts labelled A to D . | |

© UCLES 2011 0610/31/O/N/11

(a) State the name of the genus of the tiger lily.

(c) The tiger lily plant is a monocotyledon.

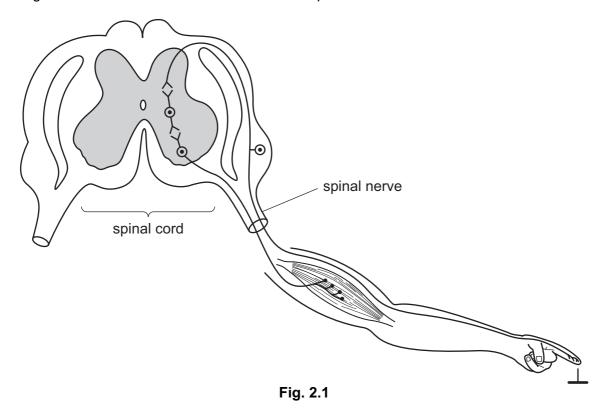

| | List two features, visible in F | ig. 1.1, that show it is a mono | ocotyledon. |
|--------------|--|---------------------------------|------------------------------|
| | 1 | | |
| | 2 | | [2] |
| (q) | The tiger lily in Fig. 1.1 reprod | ducas savually | |
| (u) | Plants reproduce sexually an | · | |
| | | the advantages and disadva | ntages of asexual and sexual |
| | | Table 1.1 | |
| | type of reproduction in flowering plants | advantages | disadvantages |
| | asexual | | |
| | sexual | | |
| | | | [4] |

[Total: 11]

2 (a) Define the term sensitivity.

For Examiner's Use

Fig. 2.1 shows the reflex arc involved in a simple reflex action.

- (b) On Fig. 2.1 use label lines and the following letters to show
 - F a receptor in the skin
 - **G** the neurone that transmits impulses to the spinal cord
 - **H** the effector in this reflex arc. [3]

| (c) | A reflex is an involuntary action. |
|-----|--|
| | Explain what is meant by the term <i>involuntary</i> action. |
| | |
| | |
| | |
| | [2] |
| (d) | Suggest the advantages of having reflexes. |
| | You may refer to an example to illustrate your answer. |
| | |
| | |
| | |
| | |
| | |
| | [3] |
| (e) | In dangerous situations there is an increase in the secretion of adrenaline from the adrenal glands. |
| | Describe three ways in which this increase in adrenaline prepares the body for action. |
| | 1 |
| | |
| | 2 |
| | |
| | 3 |
| | [3] |
| | [Total: 13] |

3 (a) State, using chemical symbols, the equation for aerobic respiration.[3]

For Examiner's Use

A student compared the respiration of germinating mung bean seeds with pea seeds using the apparatus shown in Fig. 3.1.

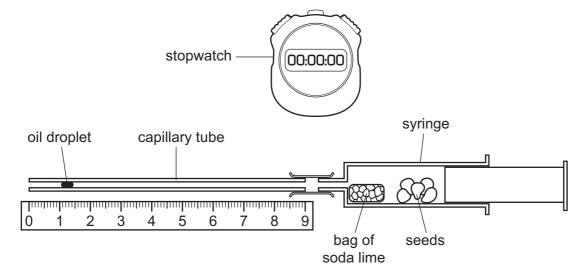

Fig. 3.1

The soda lime absorbs any carbon dioxide released by the germinating seeds. The student recorded the position of the oil droplet every minute over a period of six minutes.

(b) State three variables that should be kept constant in this investigation.

| 1 | |
|---|-----|
| 2 | |
| 3 | [3] |

(c) Table 3.1 shows the student's results.

Table 3.1

| time / | germinating m | ung bean seeds | germinating pea seeds | | |
|--------|-----------------------------|--------------------------------|-----------------------------|--------------------------------|--|
| | position of droplet / mm | distance moved / mm per minute | position of droplet / mm | distance moved / mm per minute | |
| 0 | 0 | 0 | 0 | 0 | |
| 1 | 12 | 12 | 10 | 10 | |
| 2 | 23 | 11 | 19 | 9 | |
| 3 | 36 | 13 | 28 | 9 | |
| 4 | 45 | 9 | 33 | 5 | |
| 5 | 48 | 3 | 36 | 3 | |
| 6 | 48 | 0 | 36 | 0 | |

| (1) | State which way the droplet moves and explain your answer. |
|------|--|
| | |
| | |
| | |
| | |
| | |
| | [3] |
| (ii) | State what happens to the movement of the droplet after three minutes and suggest an explanation. |
| | |
| | |
| | |
| | [2] |
| | [Total: 11] |

4 Penicillin is an antibiotic produced by the fungus *Penicillium chrysogenum*.

Fig. 4.1 shows the process used to produce penicillin.

For Examiner's Use

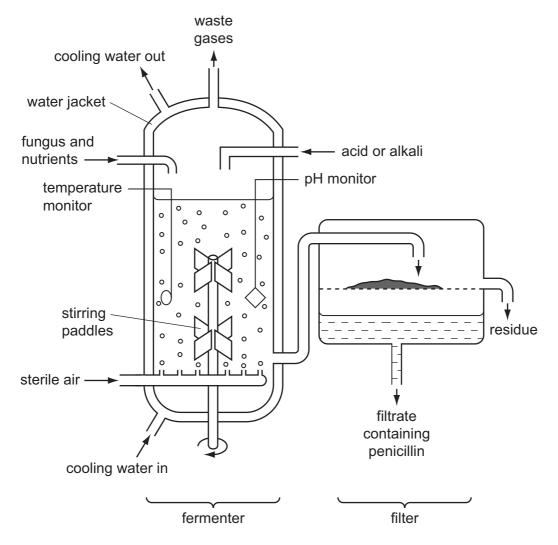

Fig. 4.1

| Explain why there is a water jacket around the fermenter and why acids or alkalis are added to the fermenter. water jacket addition of acids or alkalis [6] | (a) | Enzymes in the fungus are used to make penicillin. |
|--|-----|--|
| addition of acids or alkalis | | |
| | | water jacket |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| [6] | | addition of acids or alkalis |
| [6] | | |
| [6] | | |
| [6] | | |
| [6] | | |
| [6] | | |
| | | [6] |

Fig. 4.2 shows the mass of fungus and the yield of penicillin during the fermentation process.

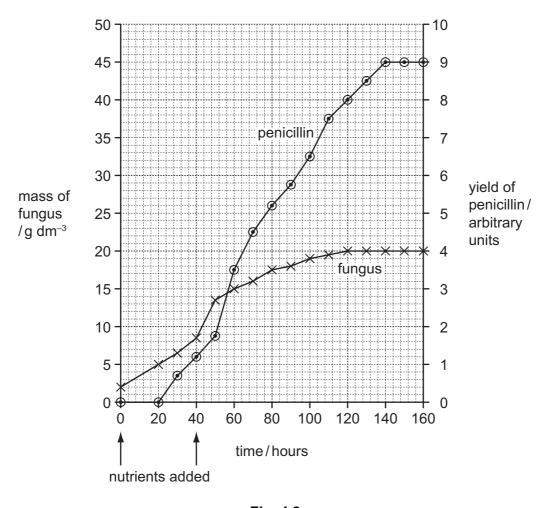

Fig. 4.2

- (b) (i) State the time interval over which the fungus grew at the maximum rate.

 [1]
 - (ii) As the fungus grows in the fermenter, the nuclei in the fungal hyphae divide.

State the type of nuclear division that occurs during the growth of the fungus in the fermenter.

[1]

| | (iii) | Explain why the growth of the fungus slows down and stops. |
|-----|-------|---|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | [3] |
| (c) | Per | nicillin is not needed for the growth of <i>P. chrysogenum</i> . |
| | (i) | State the evidence from Fig. 4.2 that shows that penicillin is not needed for this growth. |
| | | |
| | | |
| | | |
| | | [2] |
| | (ii) | The people in charge of the penicillin production emptied the fermenter at 160 hours. |
| | | Use the information in Fig. 4.2 to suggest why they did not allow the fermentation to continue for longer. |
| | | |
| | | [1] |

| (d) | Downstream processing refers to all the processes that occur to the contents of the fermenter after it is emptied. This involves making penicillin into a form that can be used as a medicine. |
|-----|--|
| | Explain why downstream processing is necessary. |
| | |
| | |
| | |
| | |
| | |
| | [3] |
| (e) | Explain why antibiotics, such as penicillin, kill bacteria but not viruses. |
| | |
| | |
| | |
| | |
| | [2] |
| | [Total: 19] |

5 Haemoglobin is a large protein molecule. The structure of each haemoglobin molecule is controlled by a gene that has two alleles:

For Examiner's Use

- **Hb**^A codes for the normal form of haemoglobin,
- **Hb**^S codes for an abnormal form of haemoglobin.

Red blood cells containing only the abnormal form of haemoglobin become a stiff, sickle shape in conditions of low oxygen concentration. This gives rise to sickle cell anaemia.

| (a) | Describe the harmful effects on the body of having red blood cells which become sickle-shaped. |
|-----|--|
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | [5 |

People who are heterozygous for the gene for haemoglobin produce both the normal and abnormal forms of haemoglobin. These people show no symptoms or have very mild symptoms known as sickle cell trait.

(b) (i) Complete the genetic diagram to show how a couple who are both heterozygous

For Examiner's Use

| may have a c | mid with sickle cell anaemia. | |
|----------------------|--------------------------------------|-----------------------------|
| parental phenotypes | sickle cell trait | sickle cell trait |
| parental genotypes | | |
| gametes | | + |
| | | |
| | | |
| | | |
| | | |
| | | |
| offspring genotypes | | |
| offspring phenotypes | | |
| | | [3] |
| (ii) What is the cl | hance of a child born to this couple | having sickle cell anaemia? |

In some parts of the world, up to 25% of the population have sickle cell trait.

© UCLES 2011 0610/31/O/N/11

(c) State the advantage of having sickle cell trait.

| Discuss whether sickle cell trait is an example of codominance. |
|---|
| |
| |
| |
| |
| [2] |
| [Total: 12] |

Question 6 begins on page 16.

6 The brown plant hopper is a serious insect pest of rice. Spraying with pesticides is a common way to control it. However, brown plant hoppers have become resistant to pesticides.

For Examiner's Use

Fig. 6.1 shows the effect of spraying pesticides against populations of this insect pest.

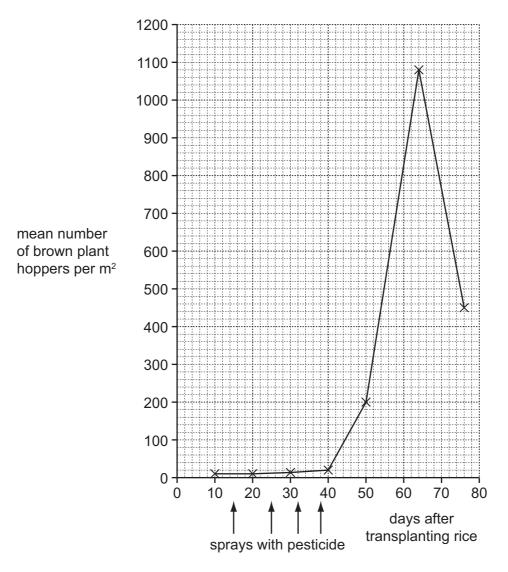

Fig. 6.1

| (a) | Define the term <i>population</i> . | |
|-----|-------------------------------------|-----|
| | | |
| | | |
| | | |
| | | [2] |

| (b) | Use Fig. 6.1 to describe the effect of pesticides on populations of the brown plant hopper. | For Examiner's Use |
|-----|---|--------------------------|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | [3] | |
| (c) | Some pesticides used against insects kill them on contact. Others are systemic pesticides. | |
| | Explain how these systemic pesticides kill insects. | |
| | | |
| | | |
| | | |
| | [2] | |

(d) As an alternative to spraying pesticides, some farmers use predatory animals, such as the hunting spider, *Lycosa pseudoannulata*, to control brown plant hoppers.

For Examiner's Use

During an investigation into the effectiveness of this method, brown plant hoppers were put into cages in rice fields. The plant hoppers could not leave the cages but were able to feed. Predators, such as hunting spiders, could enter some of the cages to feed.

Fig. 6.2 shows the change in numbers of brown plant hoppers in these cages over a period of time.

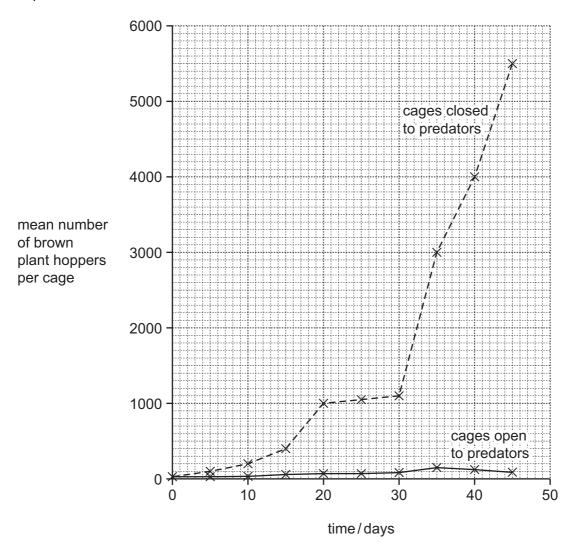

Fig. 6.2

| Use the information in Fig. 6.2 to explain the advantages of using predators, such as spiders, to control brown plant hoppers. |
|--|
| |
| |
| |
| |
| |
| |
| |
| [3] |
| Rice growing has involved the destruction of forests. |
| Describe the long-term effects of deforestation on the environment. |
| |
| |
| |
| |
| |
| |
| |
