1916	Paper 6 Alterna	tive to Practical	May/June 2013 1 hour
3 4 5 1 2		wer on the Question Paper. laterials are required.	Thou

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams or graphs.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used. You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 11 printed pages and 1 blank page.

1 Fig. 1.1 shows a bird's egg. Part of the shell has been removed.

Approximately 90% of albumen is water. The remaining 10% is made up of other substances such as reducing sugar.

(a) Describe how you could safely test a sample of albumen for reducing sugar.

		[4]
(b)	A student tested some albumen for the presence of protein using Biuret reagent. The solution changed colour. It was a positive result.	
	Describe this colour change.	
		•••••
		[1]

For Examiner's Use (c) Fig. 1.2 shows an experiment to investigate the effect of acid on albumen.

The test-tubes were observed after five minutes. The results are shown in Table 1.1.

test-tube	observation
1	stayed as a clear liquid
2	changed from a clear liquid to a white solid

(i) State a conclusion that can be made from these results.

(ii) State why water was added to test-tube 1. [1] For Examiner's Use

(d)	Fat is present in the yolk. A student carried out the emulsion test on a sample of yolk and it gave a positive result. State what the student would observe.	For Examiner's Use
	[1]	
(e)	Two students wanted to investigate the effect of concentration of acid on albumen.	
	For this investigation, suggest a suitable:	
	variable to change;	
	variable to measure or observe;	
	variable to control. [3]	
	[Total: 11]	

2 Fig. 2.1 shows the back leg of two animals.

The animals belong to two different vertebrate groups.

animal A

animal **B**

Fig. 2.1

(a) (i) Describe **one similarity**, **visible** in Fig. 2.1, between the leg of animal **A** and the leg of animal **B**.

[1]

(ii) Complete Table 2.1 to state **two differences**, **visible** in Fig. 2.1 between the leg of animal **A** and the leg of animal **B**.

feature	animal A	animal B

For Examiner's Use

© UCLES 2013

(b) Make a large, labelled drawing of the leg of animal A.

For Examiner's Use

[5]

(c) You are going to calculate the magnification of your drawing of the photograph of the leg of animal **A**.

Length of line **PQ** in Fig. 2.1 is 36 mm. Draw line **PQ** on your drawing in the same position as in Fig. 2.1.

Length of line PQ in drawing _____mm

Calculate the magnification of your drawing. Show your working.

magnification × [3]

(d) A population of animals was studied over nine years. The changes in the population of males are shown in Fig. 2.2 Examiner's

(i) Use the graph to estimate the total population of males and females in 1992. Assume that the number of males and females is equal. Show your working.

total population of males and females [1]
Describe the changes in the population from 1992 to 2001.
[3]
[Total: 16]

For

Use

Ten onion seedlings were cut at soil level from each side of the tray. The heights of these onion seedlings were measured and recorded. These are shown as the start heights in Table 3.1.

After three days, ten more onion seedlings were cut from each side, measured and recorded. The heights are shown in Table 3.1.

(i) Suggest why the onion seedlings were cut and removed from the tray before they were measured.

[1]

(ii) State why a sample of ten onion seedlings is better than a sample of three onion seedlings.

[1]

Table 3.1 shows the heights of the onion seedlings at the start and of those measured after three days.

For Examiner's Use

		height of seedling/mm												
	tips re	moved	tips l	eft on										
	start	after three days	start	after three days										
	84	70	70	63										
	61	76	79	65										
	54	63	57	83										
	57	76	58	79										
	56	80	53	83										
	62	71	52	74										
	68	73	61	76										
	45	60	63	60										
	64	76	51	85										
	49	75	76	62										
total height/mm	600		620											
mean height/mm	60		62											
	l	1		I										

Table 3.1

- (iii) Complete Table 3.1 by calculating the total height **and** mean height of the onion seedlings after three days. [2]
- (iv) Calculate the mean increase in height of the onion seedlings:

tips removed	mm	
tips left on	mm	

[1]

(b) The experiment was repeated with another tray of onion seedlings. The same experiment was then performed on beetroot seedlings. The results are shown in Table 3.2.

mean increase in height / mm													
onion se	edlings	beetroot seedlings											
tips removed	tips left on	tips removed	tips left on										
10	9	1	7										

Table 3.2

10

(i) Draw a bar chart on Fig. 3.2 to show the data in Table 3.2.
