

Cambridge International Examinations Cambridge International Advanced Subsidiary and Advanced Level

BIOLOGY 9700/51

Paper 5 Planning, Analysis and Evaluation

May/June 2017

MARK SCHEME
Maximum Mark: 30

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2017 series for most Cambridge IGCSE[®], Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

® IGCSE is a registered trademark.

Mark scheme abbreviations

; separates marking points

I alternative answers for the same point

R reject

A accept (for answers correctly cued by the question, or guidance for examiners)

I ignore (for answers that include irrelevant information that does not contradict the expected answer)

AW alternative wording (where responses vary more than usual)

ora or reverse argument (for answers which are written as the opposite to the expected answer)

<u>underline</u> actual word given must be used by candidate (grammatical variants accepted)

max indicates the maximum number of marks that can be given

ecf error carried forward

mp marking point (with relevant number)

	. 651.6.1.25							
Question	Answer	Mark	Guidance					
1(a)	idea that, results / they / it / test, could be affected by subject expectation / AW;	1	A 'results' in terms of, heart beat / heart rate / pulse rate / reaction time AW I may affect results / fair test / ref. to reliable results unqualified					
1(b)(i)	independent variable presence (or absence) of caffeine; dependent variables heart rate and, reaction / response, time;	2	A caffeine concentration / volume of caffeine A pulse rate / number of (heart) beats per minute A description of reaction time, e.g. time to press switch					
1(b)(ii)	max 8 of: 1. ref. to having a large number of test subjects / AW;	8	if number stated, minimum of 10 with caffeine					
	2. ref. to subjects / groups, have drinks with and without caffeine;		2. A water / 0 mg caffeine / AW as decaffeinated drink					
	3. ref. to description of method of making drinks indistinguishable or ref. to method that only, experimenter / student, can tell which is which;							
	procedure 4. ref. to test-subjects not, drinking / taking in, any caffeine (drink) for at least 5 hours before the test;							
	5. <i>Idea that each</i> subject being tested in isolation / away from others (throughout the experiment);							
	6. ref. to subject, at rest / quiet, during test / after test / whilst having measurements (reaction time and heart rate) taken;							
	7. ref. to taking measurements (of reaction time and heart rate) before giving the drink;							

© UCLES 2017 Page 3 of 8

Question	Answer	Mark	Guidance
	8. <i>ref. to</i> waiting (a minimum of) 45 minutes after giving the drink before measuring (the reaction time and heart rate);		8. A other stated times up to 2 hours / 120 minutes R around / about 45 minutes
	9. ref. to giving the same volume of drink (to all subjects);		9. A stated volumes, e.g. 100 – 350 cm ³ A 'a can' / 'a bottle' / 'a cup'
	10. ref. to test subjects being, all caffeine / all non-caffeine, users ;		10: I ref to. paired sampling
	11. ref. to test subjects being, same / similar, age / mass / weight / fitness level / ethnicity / race;		11. A same age range (e.g. 35–40) I ref. to health here (see mp 14)
	12. idea of standardised sex balance;		12. A have all of one sex / equal numbers of one sex
	13. calculate mean (for the measurements);		13. I average A repeat three times and take a mean / AW
	14. ref. to idea that health questionnaire / getting permission before testing / being aware of potential health risks or ref. to allowing test-subjects to stop if they feel unwell;		14. I low risk experiment R no risk A idea of excluding / being aware of, people with, caffeine or coffee or drink allergy / epilepsy (brought on by flashing lights) / heart conditions / neurological conditions / pregnancy / asthma I allergy / diabetes unqualified
1(c)(i)	(both sets of) data are continuous / data (are approximately) normally distribution / scatter graph or data or it suggests or shows a linear correlation / 5 or more paired observations;	1	A interval data A relationship for correlation I trend / pattern
1(c)(ii)	there is a negative (linear) correlation / as caffeine concentration increases as reaction time decreases;	1	A relationship for correlation I trend / pattern I qualification, e.g. strong / weak

© UCLES 2017 Page 4 of 8

tract 2 from the (total) number of pairs of data;	3	I number alone $df = n - 2/10 - 2 (= 8)$ A $n - 1/10 - 1 (= 9)$ or $n = 10$ or $(n - 1) + (n - 1)/10 - 1 + 10 - 1 (= 18)$ A categories / samples for pairs of data I subjects
se the probability table at 5% / 0.05 ;	2	
	3	
ompare the (calculated) ${\it r}$ value / 0.722, to the critical se / 0.632 ;		2. A table / tabulated, values as AW for critical values A ref. to higher / lower as evidence of comparison
ignificant, if / as, (calculated) r value / 0.722, is higher n critical value / ora ;		3. A (less than) 5% probability / P = (<) 0.05, that the value is due to chance A 95% chance, that it is significant / that it is not due to chance A 'reject the null hypothesis' I ref. to the sign + or – R if ref. to 'expected v observed' / significant difference
dea that only one person was tested for each of the centrations;	2	A only 10 subjects I not a large number of / not enough, subjects / AW
dea that a response could be, atypical / anomalous ple vary in their response (to caffeine) / an example of a sible variation in response;		A ref.to subject 5 or 6 is anomalous I ref. to other experimental conditions not being controlled.
a that concentration of acetylcholine remains high (in apses)	1	A more acetylcholine present / acetylcholine, remains for longer / not broken down / increases / constantly secreted, so I reduces time for impulse to travel / impulse (s) travel faster / more synapses / AW
ple sik a <i>tl</i> ap	e vary in their response (to caffeine) / an example of a ple variation in response; that concentration of acetylcholine remains high (in ses) that reaction time is faster / (muscles) respond more y / response is more rapid / (post synaptic) neurones	e vary in their response (to caffeine) / an example of a ple variation in response; that concentration of acetylcholine remains high (in ses) that reaction time is faster / (muscles) respond more

Question	Answer	Mark	Guidance
2(a)(i)	max 2 of:1. the number of times the populations were sampled;2. the number of locations within each site;	2	1. populations sampled, 10 / the same number of, times
	 3. the time of year that the populations were sampled; 4. the day on which samples were taken (was the same); 5. idea that (size always) measured, as length / to nearest mm / in mm; 6. (one / the same) species of beetle (counted); 		3. A populations sampled in the, same / warmest, (3) months / time of year / season I temperature
2(a)(ii)	 trap / collect / sample / capture / AW, beetles, mark and release; re-trap beetles, and count / record the number of marked beetles, out of the total number recaptured; 	2	max 1 for 'mark, release, recapture' unqualified 2 marks for mark, release, recapture and correct formula I incorrect / incomplete formula correct formula = number in first sample × number in second sample marked number in second sample

Question	Answer						Mark	Guidance
2(b)(i)	site	Α	В	С	D	E	2	
	population of beetles	10792	11 314	18426	15 224	17 650		
	number of large beetles	6520	6276	10 687	6432	6523		
	number of small beetles	4272	5038	<u>7739</u> ;	8792	11 127		
	percentage of large beetles	60	<u>55</u> ;	58	42	37		
2(b)(ii)	supports idea that as th less in higher						1	A E hottest and has smallest, percentage / proportion of large beetles I any ref. to population size / number A partially or not supported if justified, e.g. idea that no clear pattern throughout range / ABC (BC / AB / AC) percentages similar but temperature varies A idea that no data relating to actual body size

© UCLES 2017 Page 7 of 8

Question	Answer	Mark	Guidance
2(c)	 max 2 of: as temperature increases, proportion / percentage of, large beetles decreases; ora idea that (temperature) variations between A, B and C do not seem to affect size much as, percentage / proportion, of large beetles similar (60, 55, 58); ref. to differences in annual (temperature) range related to, percentage / proportion of, large / small, beetles; ref. to average yearly temperature values or groups of values linked correctly to stated percentage or proportion of, large / small, beetles; ref. to lowest average temperature values or groups of values linked correctly to stated percentage or proportion of, large / small, beetles; ref. to highest average temperature values or groups of values linked correctly to stated percentage or proportion of, large / small, beetles; 	2	
2(d)	must state what the aspect of climate change is considered e.g. warmer/cooler/more extreme/wetter/drier/windier/stormier, etc one example of at least one possible climatic change and effect on population number or beetle size;	1	the effect must be possible in relation to the aspect of climate change quoted but does not need to be justified e.g. A if global temperature rises / falls, would expect, smaller / larger / AW, populations A if global temperature rises would expect a higher, percentage / proportion, of small beetles in the population ora A global warming may result in an overall smaller body size A global warming could increase predators so reducing beetles
