

**CAMBRIDGE INTERNATIONAL EXAMINATIONS**

**Cambridge International Advanced Level**

**MARK SCHEME for the October/November 2015 series**

**9231 FURTHER MATHEMATICS**

**9231/22**

Paper 2, maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2015 series for most Cambridge IGCSE®, Cambridge International A and AS Level components and some Cambridge O Level components.

® IGCSE is the registered trademark of Cambridge International Examinations.

<b>6</b>	Find prob. $p$ of head from mean = $2 \times$ variance: $1/p = 2 \times (1-p)/p^2$ , $p = \frac{2}{3}$ <b>A.G.</b> <b>M1 A1</b>	2	
(i)	Find $P(X=4)$ (denoting $1-p$ by $q$ [ $= \frac{1}{3}$ ]): $P(X=4) = q^3 \times p$ $= 2/81$ or $0.0247$ <b>B1</b>	1	
(ii)	Find or state $P(X > 4)$ : $P(X > 4) [= 1 - (1 + q + q^2 + q^3) \times p]$ $= 1 - (1 - q^4) = q^4$ $= 1/81$ or $0.0123$ <b>M1 A1</b>	2	
(iii)	Formulate condition for $N$ : $1 - q^N > 0.999$ , $[\left(\frac{1}{3}\right)^N < 0.001]$ Take logs (any base) to give bound for $N$ : $N > \log 0.001 / \log \frac{1}{3}$ Find $N_{\min}$ : $N > 6.29$ , $N_{\min} = 7$ ( $N < 6.29$ or $N = 6.29$ earns M2 A0)	3	<b>8</b>
<b>7</b>	Find $F(x)$ for $1 \leq x \leq 4$ : $F(x) = (x^3 - 1)/63$ <b>B1</b>		
	Find $G(y)$ from $Y = X^2$ for $1 \leq x \leq 4$ : (result may be stated) $G(y) = P(Y < y) = P(X^2 < y)$ $= P(X < y^{1/2}) = F(y^{1/2})$ $= (y^{3/2} - 1)/63$ <b>M1 A1</b>		
	Find $g(y)$ for corresponding range of $y$ : $g(y) = y^{1/2}/42$ <b>A.G.</b>	<b>A1</b>	
	Find or state corresponding range of $y$ : $1 \leq y \leq 16$ <b>A.G.</b>	<b>B1</b>	5
(i)	Find median value $m$ of $Y$ : $(m^{3/2} - 1)/63 = \frac{1}{2}$ $m = 32.5^{2/3} = 10.2$ <b>M1 A1</b>	2	
(ii)	Find $E(Y)$ [or equivalently $E(X^2)$ ]: $E(Y) = \int y g(y) dy = \int y^{3/2} dy / 42$ $= [y^{5/2}]_1^{16} / 105 = 1023/105$ $= 341/35$ or $9.74$ <b>M1 A1</b>	2	<b>9</b>
