## Location Entry Codes

As part of CIE's continual commitment to maintaining best practice in assessment, CIE uses different variants of some question papers for our most popular assessments with large and widespread candidature. The question papers are closely related and the relationships between them have been thoroughly established using our assessment expertise. All versions of the paper give assessment of equal standard.

The content assessed by the examination papers and the type of questions is unchanged.
This change means that for this component there are now two variant Question Papers, Mark Schemes and Principal Examiner's Reports where previously there was only one. For any individual country, it is intended that only one variant is used. This document contains both variants which will give all Centres access to even more past examination material than is usually the case.

The diagram shows the relationship between the Question Papers, Mark Schemes and Principal Examiners' Reports that are available.

Question Paper

| Introduction |
| :--- |
| First variant Question Paper |
| Second variant Question <br> Paper |

## Mark Scheme

Principal Examiner's
Report

| Introduction |
| :--- |
| First variant Principal <br> Examiner's Report |
| Second variant Principal <br> Examiner's Report |

Who can I contact for further information on these changes?
Please direct any questions about this to CIE's Customer Services team at:
international@cie.org.uk

The titles for the variant items should correspond with the table above, so that at the top of the first page of the relevant part of the document and on the header, it has the words:

- First variant Question Paper / Mark Scheme / Principal Examiner's Report
or
- Second variant Question Paper / Mark Scheme / Principal Examiner’s Report as appropriate.

Paper 3 （Extended）
May／June 2009
2 hours
Candidates answer on the Question Paper．
No Additional Materials are required．

## READ THESE INSTRUCTIONS FIRST

Write your Centre number，candidate number and name on all the work you hand in．
Write in dark blue or black pen．
You may use a soft pencil for any diagrams，graphs，tables or rough working．
Do not use staples，paper clips，highlighters，glue or correction fluid．
DO NOT WRITE IN ANY BARCODES．

Answer all questions．
A copy of the Periodic Table is printed on page 28.
At the end of the examination，fasten all your work securely together．
The number of marks is given in brackets［ ］at the end of each question or part question．

| For Examiner＇s Use |  |
| :---: | :---: |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |
| 5 |  |
| 6 |  |
| 7 |  |
| 8 |  |
| 9 |  |
| Total |  |

This document consists of $\mathbf{2 5}$ printed pages and $\mathbf{3}$ blank pages．

1 (a) A student investigated how a change in potential difference across a lamp affec current flowing through it.

She used wires to connect the components shown in Fig. 1.1 to make a circuit.
For

Fig. 1.1
(i) Using the correct symbols, draw a diagram to show the circuit she used.
(ii) Explain why the variable resistor is included in the circuit.
$\qquad$
$\qquad$
(iii) Her results are shown in Table 1.1.

Table 1.1

| potential difference <br> across lamp/V | current through <br> lamp/A | resistance of lamp <br> filament/ $\Omega$ |
| :---: | :---: | :---: |
| 4 | 1.2 | 3.3 |
| 8 | 1.5 |  |
| 12 | 1.7 | 7.1 |

Complete the table by calculating the missing resistance and writing your answer in the empty box.

State the formula that you use and show your working.
formula
working
(iv) The student concluded that the relationship between potential difference and current did not correspond to Ohm's law.

Explain why the relationship between potential difference and current for the lamp did not correspond to Ohm's law.
$\qquad$
$\qquad$
$\qquad$
(b) Fig. 1.2 shows a wire moving upwards between the poles of two magnets. The the wire are connected to a sensitive ammeter. The ammeter shows the ind current.

Fig. 1.2
(i) Draw on the ammeter in Fig. 1.3 the reading obtained if the wire was moved twice as quickly in the same direction.

Fig. 1.3
(ii) Draw on the ammeter in Fig. 1.4 the reading obtained if the wire was moved in the opposite direction.

Fig. 1.4
(iii) Suggest why the ammeter must be a sensitive ammeter.
$\qquad$
$\qquad$
(iv) Name a device which uses this principle of inducing an electric current when a wire moves in a magnetic field.

2 Fig. 2.1 shows a vertical section through human skin.

Fig. 2.1
(a) Describe how each of the following structures helps to lower the temperature of the body when it becomes too hot.
(i) sweat gland
$\qquad$
$\qquad$
$\qquad$
(ii) arterioles
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(b) A man ran steadily on a running track for 60 minutes. The air temperature was

Fig. 2.2 shows his core temperature (the temperature inside his body) before, duri and after the run.

Fig. 2.2
(i) Explain why the man's core temperature increased while he was running.
$\qquad$
$\qquad$
$\qquad$
(ii) Suggest why his core temperature dropped below normal when he stopped running.
$\qquad$
$\qquad$
$\qquad$
(iii) When a runner has finished a marathon, a shiny silver-coloured blanket is often draped over his body. This helps to prevent his body temperature from dropping below normal.

Explain why this type of blanket is used, rather than a non-shiny dark-coloured one.
$\qquad$
$\qquad$
$\qquad$
(c) The skin has an important role in making vitamin $D$, which it does when sunlig onto it.

Explain the importance of vitamin $D$ in the body.
$\qquad$
$\qquad$

3 Food colourings are natural or synthetic dyes added to make food look more attractiv
(a) Describe the difference between natural and synthetic dyes.
$\qquad$
$\qquad$
(b) Fig. 3.1 shows a piece of cloth which is stained with food colouring.

Fig. 3.1
The cloth is washed in water containing soap solution.
Describe how soap molecules help to remove stains from the cloth. You may wish to draw some simple diagrams to help you answer this question.
$\qquad$
$\qquad$
$\qquad$
(c) Some water supplied to houses contains calcium hydrogencarbonate, $\mathrm{Ca}($ When heated, calcium hydrogencarbonate undergoes thermal decomposition.
(i) Complete the symbolic equation below which describes the thermal decomposition of calcium hydrogencarbonate.

$$
\mathrm{Ca}\left(\mathrm{HCO}_{3}\right)_{2} \rightarrow
$$

(ii) The ionic charge of a calcium ion is $2+$. Deduce the ionic charge of a hydrogencarbonate ion.

Show how you obtained your answer.
$\qquad$
$\qquad$
$\qquad$

4 (a) Many people have survived accidents where they have been exposed to radiation from radioactive materials. Such exposure can have serious effects on health.

The table and graph show how the dose (amount) of radiation received is linked to a type of cancer called leukaemia. The radiation dose is measured in units called grays.

Table 4.1

| radiation dose/grays | incidences of leukaemia/cases <br> per 10000 people per year |
| :---: | :---: |
| 1.0 | 1.0 |
| 2.5 | 2.3 |
| 5.0 |  |
| 10.0 | 10.1 |
| 15.0 | 15.2 |

Fig. 4.1
(i) The result for 5.0 grays has been missed out of the table.

Use the graph to help you fill in the missing value in the table.
(ii) What is the relationship between the ionising radiation and the incidence of leukaemia?
$\qquad$
$\qquad$
(b) Two types of nuclear radiation from naturally occurring sources are alpha and beta. They can be identified by their different penetrating powers.

Describe how you could distinguish between alpha and beta radiation by their penetrating powers.
$\qquad$
$\qquad$
$\qquad$
(c) Radon-222 $\left({ }^{222} \mathrm{Rn}\right)$ is a radioactive element. The chart in Fig. 4.2 shows the number of protons and neutrons in the nuclei of the elements formed when radon decays.

Fig. 4.2
(i) Describe how the graph shows that radon-222 $\left({ }^{222} \mathrm{Rn}\right)$ and polonium- $218\left({ }^{218} \mathrm{Po}\right)$ emit alpha particles.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(ii) State why radon and polonium are different elements.
$\qquad$
(iii) Radioactive decay can also produce gamma radiation.

Explain why gamma emission does not result in the formation of a new element.
$\qquad$
$\qquad$
(iv) Radon-222 has a half-life of 4 days.

Explain what is meant by the term half-life.
$\qquad$
$\qquad$
(v) 1 mg of radon-222 is allowed to decay.

Calculate after how many days there would be 0.125 mg of radon- 222 remaining.
Show your working.
$\qquad$
$\qquad$

BLANK PAGE

Please turn over for Question 5.

5 Fig. 5.1 shows three arthropods.

Fig. 5.1
(a) (i) The arthropod $\mathbf{A}$ is a locust, which belongs to the insect class.

State two features, visible on the locust in Fig. 5.1, which are characteristic of insects.

1

2
(ii) Name the classes to which arthropods $\mathbf{B}$ and $\mathbf{C}$ belong.

B

C
(b) In one species of locust, the body colour may be brown or green. This is controll gene with two alleles, $\mathbf{G}$ and $\mathbf{g}$. If two locusts with brown bodies are mated, offspring are always brown. If two locusts with green bodies are mated, some of offspring may be brown.
(i) Write the possible genotype or genotypes for each of the following phenotypes.
brown body
green body
(ii) Use a genetic diagram to explain why some of the offspring of two locusts with green bodies may have brown bodies.
(c) State whether the variation in body colour in these locusts is an example of continuous variation or discontinuous variation. Explain your answer.
$\qquad$
$\qquad$
(d) Locusts sometimes form huge swarms, which can fly long distances, and can eat and completely destroy whole fields of crops. These swarms are sometimes sprayed with pesticides from aeroplanes.

Suggest two possible disadvantages of using pesticides in this way.
1
$\qquad$
2

6 Fig. 6.1 shows apparatus a student used to investigate electrolysis using conce sodium chloride solution as the electrolyte.

Fig. 6.1
When an electric current flowed through the circuit, chlorine gas collected in tube $\mathbf{Q}$ and hydrogen gas collected in tube $\mathbf{R}$.

The balanced equation below describes the overall chemical change which takes place.

$$
2 \mathrm{NaCl}+2 \mathrm{H}_{2} \mathrm{O} \rightarrow 2 \mathrm{NaOH}+\mathrm{Cl}_{2}+\mathrm{H}_{2}
$$

(a) On Fig. 6.1 label the anode.

Give a reason for your choice.
$\qquad$
$\qquad$
$\qquad$
(b) The student allowed the current to flow through the apparatus until 0.01 moles of hydrogen gas had been produced.
(i) State the number of moles of chlorine which were produced during the experiment.
(ii) Calculate the mass of sodium hydroxide which was produced durn experiment. (Relative atomic masses $\mathrm{Na}=23, \mathrm{O}=16, \mathrm{H}=1$ )

Show your working.
(c) When chlorine gas is bubbled through a colourless solution of potassium bromide, KBr , the solution turns orange because the element bromine is produced.
(i) Write a balanced equation for the reaction between chlorine and potassium bromide.
$\qquad$
(ii) Complete the bonding diagram of a bromine molecule to show the arrangement of the outer electrons of each atom.

(iii) Describe how bromine is used to test hydrocarbons to find out whether or not they are unsaturated.
$\qquad$
$\qquad$
$\qquad$
(iv) Complete the displayed formula to show the alkene which contains four carbon atoms in each of its molecules.

7 A student carried out an investigation into the response of plant shoots to light.
He grew six maize seedlings and treated them as follows.

- He did nothing to seedlings $\mathbf{A}$ and $\mathbf{D}$.
- He cut the tips off seedlings $\mathbf{B}$ and $\mathbf{E}$.
- He covered the tips of seedlings $\mathbf{C}$ and $\mathbf{F}$ with black paper.

He placed one group of seedlings where they received light from all directions. He placed the second group of seedlings in a container where they received light from one side only.

Fig. 7.1 shows the appearance of the six seedlings when the experiment was first set up, and after one day.

Fig. 7.1
(a) The student concluded that the tip of a shoot is needed for growth. Desch evidence in Fig. 7.1 that supports this conclusion.
(b) Using the information in Fig. 7.1, deduce the positions of the receptor and the effector that are responsible for the growth response of a seedling towards light.

Explain the evidence for your deductions.
position of receptor $\qquad$
evidence $\qquad$
$\qquad$
position of effector
evidence $\qquad$
(c) Describe how auxin may be involved in the growth of shoots towards the light. You can use a diagram if it helps your answer.
$\qquad$
$\qquad$
$\qquad$

8 A diver is working under water, wearing a diving suit and helmet.
(a) The diving helmet has a plastic window of area $100 \mathrm{~cm}^{2}$. The air pressure inside helmet is the same as the water pressure outside.
(i) At a depth of 40 m , the diver breathes air at a pressure of $50 \mathrm{~N} / \mathrm{cm}^{2}$.

Calculate the force exerted by the air on the helmet window at this depth.
Use the formula
pressure = force/area
Show your working.
(ii) At the surface of the sea, the pressure of the atmosphere is $10 \mathrm{~N} / \mathrm{cm}^{2}$.

Estimate a value for the pressure at a depth of 10 m . Explain your answer.
$\qquad$
$\qquad$
$\qquad$
(b) The diver sees a squid. A squid moves by forcing out a jet of water from its body

This moving water has momentum.
(i) The mass of water forced out is 1.2 kg and has a velocity of $10 \mathrm{~m} / \mathrm{s}$.

Show that the momentum of the moving water is $12 \mathrm{kgm} / \mathrm{s}$.
State the formula that you use and show your working.
formula
working
(ii) To conserve momentum, the squid's momentum must equal the momentum of the water jet in the opposite direction.

The mass of the squid is 4 kg .
Calculate the velocity of the squid.
State the formula that you use and show your working.
formula
working
(c) (i) A dolphin near the surface is able to communicate underwater by ultrasonic waves with a frequency of 39000 Hz .

The speed of these waves in water is $1500 \mathrm{~m} / \mathrm{s}$.
Calculate the wavelength of the waves.
State the formula that you use and show your working.
formula
working
(ii) The hearing range for a dolphin is from 1 kHz to 100 kHz . State the hearing range of an average adult human.
(iii) Fig. 8.1 shows the speed of the dolphin travelling through water.

Fig. 8.1
Calculate the distance covered by the dolphin in the first 20 seconds.
Show your working.

9 Many metals react with dilute acids.
(a) Complete the word equation for the reaction of magnesium with dilute sulfuric acid.

(b) A student used the apparatus shown in Fig. 9.1 to investigate the rate of reaction between sulfuric acid and magnesium.

To start the reaction, she tilted the flask to mix the reactants.

Fig. 9.1
She measured the volume of gas which had collected in the measuring cylinder every minute for several minutes.

Her results are shown in Fig. 9.2.

Fig. 9.2

Explain these results in terms of the collisions between particles in the reacting
$\qquad$
$\qquad$
$\qquad$
(c) Fig. 9.3 shows a pencil sharpener. Both the case and the blades are made using alloys.

Fig. 9.3
Alloys rather than pure metals are used because they are stronger and less malleable.
Draw diagrams to show part of the giant structures of a pure metal and an alloy.
Use your diagrams to help you to explain why alloys are less malleable than the pure metals they contain.
diagram of the structure of a pure metal
diagram of the structure of an alloy
$\qquad$
$\qquad$
$\qquad$
(d) Table 9.1 shows information about the atomic structures of four particles $\mathbf{W}$, Z.

Table 9.1

|  | number of <br> protons | number of <br> neutrons | electrons in <br> 1st shell | electrons in <br> 2nd shell | electrons in <br> 3rd shell |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{W}$ | 11 | 12 | 2 | 8 | - |
| $\mathbf{X}$ | 9 | 10 | 2 | 8 | - |
| $\mathbf{Y}$ | 12 | 12 | 2 | 8 | 2 |
| $\mathbf{Z}$ | 12 | 13 | 2 | 8 | 2 |

Explain which two particles from $\mathbf{W}, \mathbf{X}, \mathbf{Y}$ and $\mathbf{Z}$ in the table would attract one another very strongly.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

DATA SHEET
The Periodic Table of the Elements

The volume of one mole of any gas is $24 \mathrm{dm}^{3}$ at room temperature and pressure (r.t.p.).

| 4 | 1.2 | 3.3 |
| 8 | 1.5 |  |
| 12 | 1.7 | 7.1 |

Complete the table by calculating the missing resistance and writing your answer in the empty box.

State the formula that you use and show your working.
formula
working
(iv) The student concluded that the relationship between potential difference and current did not correspond to Ohm's law.

Explain why the relationship between potential difference and current for the lamp did not correspond to Ohm's law.
$\qquad$
$\qquad$
$\qquad$
(b) Fig. 1.2 shows a wire moving upwards between the poles of two magnets. The the wire are connected to a sensitive ammeter. The ammeter shows the ind current.

Fig. 1.2
(i) Draw on the ammeter in Fig. 1.3 the reading obtained if the wire was moved twice as quickly in the same direction.

Fig. 1.3
(ii) Draw on the ammeter in Fig. 1.4 the reading obtained if the wire was moved in the opposite direction.

Fig. 1.4
(iii) Suggest why the ammeter must be a sensitive ammeter.
$\qquad$
$\qquad$
(iv) Name a device which uses this principle of inducing an electric current when a wire moves in a magnetic field.

2 (a) Fig. 2.1 shows a transverse section of an artery.

Fig 2.1
(i) Explain why arteries have elastic tissue in their walls.
$\qquad$
$\qquad$
$\qquad$
(ii) Veins contain valves. Explain why arteries do not contain valves.
$\qquad$
$\qquad$
$\qquad$
(b) A man ran steadily on a running track for 10 minutes. Fig. 2.2 shows the rate of oxygen consumption by the muscles of his heart before, during and after the run.

Fig. 2.2
(i) Explain why his heart muscle consumed oxygen at a greater rate during than before it.
(ii) Explain why the rate of oxygen consumption by the heart muscle did not return to normal immediately after the run.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(c) In 1968, the Olympic Games were held in Mexico City. This is at a high altitude, and there is less oxygen in the air than at sea level.

Athletes running in 100 m races had no difficulties and times were fast. However, athletes running in long distance races became very tired while they were running and their times were slow.

Suggest an explanation for this.
$\qquad$
$\qquad$
(d) Competitive athletes need to have plenty of iron in their diet.

Describe the function of iron in the body.
$\qquad$

3 Food colourings are natural or synthetic dyes added to make food look more attractiv
(a) Describe the difference between natural and synthetic dyes.
$\qquad$
$\qquad$
(b) Fig. 3.1 shows a piece of cloth which is stained with food colouring.

Fig. 3.1
The cloth is washed in water containing soap solution.
Describe how soap molecules help to remove stains from the cloth. You may wish to draw some simple diagrams to help you answer this question.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(c) Some water supplied to houses contains calcium hydrogencarbonate, $\mathrm{Ca}($ When heated, calcium hydrogencarbonate undergoes thermal decomposition.
(i) Complete the symbolic equation below which describes the thermal decomposition of calcium hydrogencarbonate.

$$
\mathrm{Ca}\left(\mathrm{HCO}_{3}\right)_{2} \rightarrow
$$

(ii) The ionic charge of a calcium ion is $2+$. Deduce the ionic charge of a hydrogencarbonate ion.

Show how you obtained your answer.
$\qquad$
$\qquad$
$\qquad$

4 (a) Many people have survived accidents where they have been exposed to radiation from radioactive materials. Such exposure can have serious effects on health.

The table and graph show how the dose (amount) of radiation received is linked to a type of cancer called leukaemia. The radiation dose is measured in units called grays.

Table 4.1

| radiation dose/grays | incidences of leukaemia/cases <br> per 10000 people per year |
| :---: | :---: |
| 1.0 | 1.0 |
| 2.5 | 2.3 |

6 Fig. 6.1 shows apparatus a student used to investigate electrolysis using conce sodium chloride solution as the electrolyte.

Fig. 6.1
When an electric current flowed through the circuit, chlorine gas collected in tube $\mathbf{Q}$ and hydrogen gas collected in tube $\mathbf{R}$.

The balanced equation below describes the overall chemical change which takes place.

$$
2 \mathrm{NaCl}+2 \mathrm{H}_{2} \mathrm{O} \rightarrow 2 \mathrm{NaOH}+\mathrm{Cl}_{2}+\mathrm{H}_{2}
$$

(a) On Fig. 6.1 label the anode.

Give a reason for your choice.
$\qquad$
$\qquad$
$\qquad$
(b) The student allowed the current to flow through the apparatus until 0.01 moles of hydrogen gas had been produced.
(i) State the number of moles of chlorine which were produced during the experiment.
(ii) Calculate the mass of sodium hydroxide which was produced durn experiment. (Relative atomic masses $\mathrm{Na}=23, \mathrm{O}=16, \mathrm{H}=1$ )

Show your working.
(c) When chlorine gas is bubbled through a colourless solution of potassium bromide, KBr , the solution turns orange because the element bromine is produced.
(i) Write a balanced equation for the reaction between chlorine and potassium bromide.
$\qquad$
(ii) Complete the bonding diagram of a bromine molecule to show the arrangement of the outer electrons of each atom.

(iii) Describe how bromine is used to test hydrocarbons to find out whether or not they are unsaturated.
$\qquad$
$\qquad$
$\qquad$
(iv) Complete the displayed formula to show the alkene which contains four carbon atoms in each of its molecules.

7 A student carried out an investigation into the response of plant shoots to light.
He grew six maize seedlings and treated them as follows.

- He did nothing to seedlings $\mathbf{A}$ and $\mathbf{D}$.
- He cut the tips off seedlings $\mathbf{B}$ and $\mathbf{E}$.
- He covered the tips of seedlings $\mathbf{C}$ and $\mathbf{F}$ with black paper.

He placed one group of seedlings where they received light from all directions. He placed the second group of seedlings in a container where they received light from one side only.

Fig. 7.1 shows the appearance of the six seedlings when the experiment was first set up, and after one day.

Fig. 7.1
(a) The student concluded that the tip of a shoot is needed for growth. Desch evidence in Fig. 7.1 that supports this conclusion.
(b) Using the information in Fig. 7.1, deduce the positions of the receptor and the effector that are responsible for the growth response of a seedling towards light.

Explain the evidence for your deductions.
position of receptor $\qquad$
evidence $\qquad$
$\qquad$
position of effector
evidence $\qquad$
(c) Describe how auxin may be involved in the growth of shoots towards the light. You can use a diagram if it helps your answer.
$\qquad$
$\qquad$
$\qquad$

8 Two skiers $\mathbf{A}$ and $\mathbf{B}$ start a straight downhill race.
Fig 8.1 shows how the motion of skier $\mathbf{A}$ changes during the race. Skier $\mathbf{A}$ finishes the ra after 40 seconds and then slows down and stops after 50 seconds.

Fig. 8.1
(a) (i) Describe the motion of skier $\mathbf{A}$ between 0 and 30 seconds.
$\qquad$
$\qquad$
(ii) Calculate the distance skier $\mathbf{A}$ travels between 0 and 30 seconds.

Show your working.
(b) The mass of skier $\mathbf{A}$ is 60 kg . Calculate the kinetic energy of the skier when he is $10 \mathrm{~m} / \mathrm{s}$.

State the formula that you use and show your working.
formula
working
(c) (i) Calculate the deceleration of skier $\mathbf{A}$ between 40 and 50 seconds.

State the formula that you use and show your working.
formula
working
(ii) Calculate the force on skier $\mathbf{A}$ which causes this deceleration.

State the formula that you use and show your working.
formula
working
(d) Skier $\mathbf{B}$ wins the race. On Fig. 8.1 show how the motion of skier $\mathbf{B}$ might change during the race.

Explain your answer.
$\qquad$
$\qquad$

9 Hydrogen peroxide, $\mathrm{H}_{2} \mathrm{O}_{2}$, is a colourless liquid which slowly decomposes according equation below.

$$
\text { hydrogen peroxide } \rightarrow \text { water }+ \text { oxygen. }
$$

If the black solid compound manganese dioxide, $\mathrm{MnO}_{2}$, is added to a solution of hydrogen peroxide, it acts as a catalyst and the rate of reaction is greatly increased.
(a) Describe the test for oxygen gas.
$\qquad$
$\qquad$
(b) A student uses the apparatus shown in Fig. 9.1 to study the rate of reaction when hydrogen peroxide solution decomposes.

Fig. 9.1
The student carries out three trials to investigate the effect of changing the concentration of the hydrogen peroxide solution. She attempts to keep all other variables the same in each trial.

Her results are shown in Table 9.1.

Table 9.1

| trial <br> number | hydrogen <br> peroxide <br> concentration <br> in mol/ dm | volume of <br> oxygen <br> collected $/ \mathbf{c m}^{3}$ | time taken to <br> collect <br> oxygen $/ \mathbf{s}$ | rate of <br> production of <br> oxygen in <br> $\mathbf{c m}^{3} / \mathbf{s}$ |
| :---: | :---: | :---: | :---: | :---: |
| 1 | 0.4 | 50 | 10 | 5.0 |
| 2 | 0.2 | 50 | 20 |  |
| 3 | 0.1 | 50 | 40 | 1.25 |

(i) Calculate the rate of production of oxygen for Trial 2 and write the value in Table 9.1.
(ii) Using the data in Table 9.1, explain in terms of collisions of molecules, the relation between the rate of production of oxygen and the concentration of hydrogen peroxide solution in this experiment.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(iii) Describe how the student could show that manganese dioxide is behaving as a catalyst and is therefore not used up or chemically changed.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(c) Table 9.2 shows information about the atomic structure of four particles $\mathbf{P}, \mathbf{Q}, \mathbf{R}$ and

Table 9.2

|  | number of <br> protons | number of <br> neutrons | electrons in <br> $\mathbf{1}^{\text {st }} \mathbf{s h e l l}$ | electrons in <br> $\mathbf{2}^{\text {nd }} \mathbf{s h e l l}$ | electrons in <br> $\mathbf{3}^{\text {rd }}$ shell |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{P}$ | 17 | 20 | 2 | 8 | 8 |
| $\mathbf{Q}$ | 10 | 10 | 2 | 8 | - |
| $\mathbf{R}$ | 9 | 10 | 2 | 8 | - |
| $\mathbf{S}$ | 17 | 18 | 2 | 8 | 7 |

(i) Explain which two particles from $\mathbf{P}, \mathbf{Q}, \mathbf{R}$ and $\mathbf{S}$ are isotopes of the same element.
$\qquad$
$\qquad$
$\qquad$
(ii) State which particle from $\mathbf{P}, \mathbf{Q}, \mathbf{R}$ and $\mathbf{S}$ is an atom of a very unreactive element.

DATA SHEET
The Periodic Table of the Elements

The volume of one mole of any gas is $24 \mathrm{dm}^{3}$ at room temperature and pressure (r.t.p.).
