

Candidates answer on the Question paper No Additional Materials are required.

## **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [] at the end of each question or part question.

| For Examiner's Use |  |  |  |  |
|--------------------|--|--|--|--|
| 1                  |  |  |  |  |
| 2                  |  |  |  |  |
| 3                  |  |  |  |  |
| 4                  |  |  |  |  |

This document consists of **18** printed pages and **2** blank pages.

**BLANK PAGE** 

- 3
- 1 Fig. 1.1 shows the upper and lower surfaces of a leaf after being placed into boiling

lower surface

upper surface

(a) (i) Explain why bubbles are produced.

[2]

(ii) A second leaf was taken and its outline traced onto a piece of 15 cm x 15 cm paper. This tracing is shown in Fig. 1.2.

Fig. 1.2

Write the letter C in the complete squares. Count the number of complete squares.

number of complete (**C**) squares = [1]

Write the letter P in any incomplete squares that have an area of half a square or more.

number of incomplete (**P**) squares = [1]

- Ignore the rest of the squares.
- Add C + P to estimate the area of the leaf. You will use your answer in (a)(iii).

leaf area = \_\_\_\_\_ cm<sup>2</sup>

4

www.papaCambridge.com 5 (iii) There are approximately 100 stomata per square millimetre on the lower of this leaf. Using the leaf surface area you have determined (a)(ii), calculate the total number of stomata found on the lower surface of the leaf. area of leaf in mm<sup>2</sup> = total number of stomata = [2] (iv) There are usually fewer stomata found on the upper surface of a leaf. Suggest why this is beneficial to a plant. .....

[2]

(b) Fig. 1.3 shows an outline cross section of a piece of celery. The celery has been placed into red dye for 4 hours.

On Fig. 1.3, shade the areas to show where you would expect the red dye to be found.

Label the shaded areas with the correct name for this tissue.

Fig. 1.3

[2]

The science class is investigating the properties of carbon dioxide. They are us 2 apparatus shown in Fig. 2.1 to make and test the gas. They carry out three experiments

Fig. 2.1

## **Experiment 1**

They place about 3 cm<sup>3</sup> of distilled water in a test-tube and add a few drops of Universal Indicator. They then let the carbon dioxide bubble through the water and Universal Indicator. They see a colour change. They decide that a weak acid has been formed in the test-tube.

| (a) (i) | The colour changes from to           | [2] |
|---------|--------------------------------------|-----|
| (ii)    | Name the weak acid in the test-tube. |     |
|         |                                      | [1] |

|     | Α                  | Carbon dioxide burns in air.   |
|     | в                  | Carbon dioxide does not support combustion.  |
|     | С                  | Carbon dioxide does not burn in air.   |
|     | D                  | Carbon dioxide supports combustion.  |
|     | The                | e two correct statements are lines and [1]   |

**BLANK PAGE** 

www.papaCambridge.com 3 A student is finding the resistances of single and parallel wires using the circuit sh Fig. 3.1.

Fig. 3.1

- She connects a 25 cm length of resistance wire between the terminals.
- She closes the switch and notes the readings on the ammeter and voltmeter, and . records them in Table 3.1.
- She opens the switch and then connects a second piece of resistance wire so that • there are 2 identical wires in parallel between the terminals.
- She closes the switch and records the new ammeter and voltmeter readings. .
- She finds the ammeter and voltmeter readings using 3 and 4 wires in parallel, recording . them in Table 3.1 over the page.

- (a) The ammeter and voltmeter readings for 2 wires in parallel are shown in Fig. 3.2
  - (i) Read the ammeter and voltmeter and record the values in Table 3.1.

Fig. 3.2

(ii) Calculate the resistances for 2 wires and 3 wires in parallel.

Record them in the last column of Table 3.1.

Use the formula

resistance in ohms = potential difference in volts current in amps

[2]

Table 3.1

| number of resistance wires | current/A | potential<br>difference/V | total resistance/<br>ohms |
|----------------------------|-----------|---------------------------|---------------------------|
| 1                          | 1.0       | 2.5                       | 2.5                       |
| 2                          |           |                           |                           |
| 3                          | 2.5       | 2.0                       |                           |
| 4                          | 3.2       | 1.9                       | 0.6                       |

(b) (i) Plot a graph of total resistance/ohms (vertical axis) against number of wires

www.papaCambridge.com Draw a smooth curve, extending it so that the resistance of 5 wires in parallel ca be read.

[3]

(ii) Use your graph to find the resistance of 5 wires in parallel. Show how you do this on the graph.

> resistance of 5 wires in parallel = \_\_\_\_\_ ohms [2]

(c) The student is not satisfied that the resistance she calculated for 1 wire is accurate. Suggest how she can find a more reliable value using the same apparatus.

\_\_\_\_\_ ..... [1]

(a) A student carried out an experiment to investigate the effect of change of temp 4 on the activity of the enzyme pepsin.

www.papaCambridge.com Pepsin breaks down protein in the stomach. Its activity can be measured by timing how long it takes to break down a cloudy protein solution. The solution becomes clear.

- The student put 5.0 cm<sup>3</sup> of the protein solution into a test-tube and added • 1.0 cm<sup>3</sup> hydrochloric acid.
- He put 1 cm<sup>3</sup> of pepsin solution into another test-tube.
- He put both test-tubes into a water bath set at 35 °C until they both reached this temperature.
- He then poured the pepsin solution into the protein solution and timed how long it took for the mixture to go clear. He recorded his results in Table 4.1.
- The student repeated this procedure for each temperature.

| temperature/°C | time taken for mixture<br>to go clear/min | $\frac{1}{\text{time taken}} / \frac{1}{\text{min}}$ |
|----------------|---|--|
| 35             | 6.8                                       | 0.15   |

6 The bending of light when it travels from air into a liquid, or from a liquid into the known as refraction.

www.papaCambridge.com A student is trying to compare the refraction of light by salty water and by fresh water. He has placed a coin at the bottom of an empty bucket. A ruler is placed vertically a short distance from the bucket.

The student notes the position of his eye next to the ruler when he can just see the coin above the rim of the empty bucket. This is shown in Fig. 6.1.

Fig. 6.1

- He records the position of his eye, point **X**, in Table 6.1.
- He fills the bucket with fresh water.
- He finds and records the new position of his eye when he can just see the coin, point Y.
- He empties the bucket and refills it with salty water.
- He finds and records point **Z** when he can just see the coin.

The line **XC** shows a ray of light travelling from the coin to the student's eye. Point **O** is on this ray, just above the rim of the bucket.

(a) On the ruler in Fig. 6.2, mark and label the points Y and Z. Use the data from Table 6.1.

| Table 6.1 |  |
|-----------|--|
|-----------|--|

| contents of the bucket | point | position on ruler/cm |
|------------------------|-------|----------------------|
| air                    | X     | 94                   |
| fresh water            | Y     | 58                   |
| salty water            | Z     | 51                   |

(b) On Fig. 6.2, draw the straight lines **YO** and **ZO**. See Fig. 6.1.
