

**MARK SCHEME for the May/June 2011 question paper**  
**for the guidance of teachers**

**0417 INFORMATION AND COMMUNICATION  
TECHNOLOGY**

**0417/21**

Paper 2 (Practical Test A), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2011 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

# Dock facilities at Port Peparad

Report by: a name

*A major regional port*

The port is the largest in the north western region of the country. It has a long coast line with a total length of over two thousand kilometres and is one of the busiest existing ports in the country with forty locations. Many of these traditional harbours have been replaced by the large container ships or bulk carriers. New sites have been found for development. The massive One such port has been built in this region. to handle the export of our new range of cars. These have been built to meet national and world demands for small, economical and environmentally friendly, family transport.

## Development

Port Peparad, a successful public – private enterprise, is emerging as an important gateway port on the south eastern coast for containers, bulk and liquid cargo. With less than ten hours steaming time from the region's largest city, Port Peparad provides excellent access to the main trade lines in the north western region. Its handling facilities are developed to manage the efficient transport of our cars.

Port Peparad is operated by one of the largest container terminal operators in the world. APM Terminals has operations spread over more than 50 terminals in 31 countries, on 5 continents. With a 54% stake, APM Terminals is the largest shareholder.

## Hinterland

Port Peparad has an on-dock rail facility with dedicated sidings to handle containers, bulk and break-bulk cargo. It also offers excellent road infrastructure including bridges and dedicated rail sidings.

## Port Connectivity

Port Peparad is well connected by road and rail to the rest of the country. It is directly connected by the broad gauge rail network of the National Railways. Port Peparad is well connected by road and rail to the rest of the country. It is directly connected by the broad gauge rail network of the National Railways. Port Peparad is well connected by road and rail to the rest of the country. It is directly connected by the broad gauge rail network of the National Railways.

Port Peparad is well connected by road and rail to the rest of the country. It is directly connected by the broad gauge rail network of the National Railways. Port Peparad is well connected by road and rail to the rest of the country. It is directly connected by the broad gauge rail network of the National Railways.

Port Peparad has built an 11 kilometre long four-lane expressway connecting the port to the national highway. The Government has undertaken a project to construct a central spine road, extending up to Port Peparad.

Port Peparad has the most competitive rail freight rates coupled with excellent transit times as compared to other gateway ports on the West Coast. Port Peparad is now connected to its hinterland by the broad gauge rail network of the National Railways and is now connected by rail to all the major Inland container depots in the North West. The broad gauge rail connectivity project has been undertaken by Peparad Rail Corporation Limited (PRCL) promoted by Peparad.

personal transport that is easily afforded by families of modest incomes.

*Car exports*

We have come through some difficult years for manufacturing and show here how our planned exports of cars were actually met through the recent years of world economic downturn. It will be seen that we came through that and are meeting export targets again as world trade has picked up.

Port Peparad is the first port in this country to receive double stacked container trains (March 2006), which have a capacity of carrying 180TEUs as against 90TEUs carried in a single stack train. At present, the double stack container trains run to the inland railhead.

*Oceanographic Conditions*

Port Peparad is protected by two islands, which act as a natural breakwater making the port safe in all weather conditions. The presence of these islands also leads to the tranquillity of the water in the harbour. It also ensures the wave height is less than 0.5m most of the time. Port Peparad has now increased the draft to 14.5 metres from 12.5 metres. The water currents are between 2.5 to 3 knots during peak tidal conditions.

These favourable oceanographic conditions at Port Peparad ensure easy and safe navigation of ships round the year. Thanks to the twin islands, Port Peparad can offer its services throughout the year, even during the monsoons, which provides an added advantage to its customers.

*Storage Developments*

One of the unique features of Port Peparad is the availability of large tracts of land. This is attractive to several customers who wish to set up tank farms or warehouse facilities on site. A car storage facility is built here to hold cars while awaiting shipping. Cars are brought in by rail and loaded into containers in a newly developed container storage facility. This was developed in preparation for the launch of the new Micro range of cars which we believe will meet world wide requirements for environmentally friendly,
