## 2 English as a global language

The following passage deals with the idea of ‘Globish’ as a simplified, global form of English. It was published on Forbes.com, an international business website, in 2012.

**Discuss what you feel are the most important issues raised here relating to the changing use of English as a global language.** You should refer to specific details from the passage as well as to ideas and examples from your wider study.

### A New International Business Language: Globish

English is the global language of business, yet English is also the native tongue of relatively few people, and it is notoriously hard to learn. What can be done? Jean-Paul Nerrière came up with an answer: Globish, a kind of simplified English that is vastly easier to use and can work almost as well as a full command of the language in most business situations. 5

Nerrière, a Frenchman, was an international vice president of marketing at IBM when he noticed a pattern in how non-native English speakers communicated at conferences. He observed that when a Japanese employee met a Belgian, a Chilean and an Italian, they managed. None spoke English brilliantly but each knew the others were making mistakes too. When an American or British manager walked in, everything changed. The native speakers of English talked too fast and used mysterious expressions. 10

The secret was to employ a stripped-down vocabulary and, crucially, avoid all figurative language and never tell jokes.

So Nerrière developed a list of 1,500 English words that he is convinced you can use to communicate just about anything, and he has been building a business in training people to speak with that basic vocabulary. At his website, [globish.com](http://globish.com), Nerrière describes his simplified tongue in a seven-minute video done entirely in Globish. It doesn’t sound crude or lacking, though Nerrière retains a strong French accent. 15

Is this really a language? Or is it really a kind of pidgin, a stepping stone to a language? Robert McCrum, of the *Observer*, who has written a book titled *Globish*, says it’s actually designed to be a barrier to full English: 20

“A good European, Nerrière, describes Globish as a device that will ‘limit the influence of the English language dramatically’. He says: ‘I am helping the rescue of French, and of all the languages that are threatened by English today but which will not be at all endangered by Globish. It is in the best interests of non-Anglophone countries to support Globish, especially if you like your culture and its language.’” 25

The need for a global language is a big part of the fact of globalization, and the dominance of English looks inevitable for a good long time to come. Those with a gift for learning languages are bound to have a big advantage. For everyone else, why not start with Globish? 30

### 3 Language acquisition by children and teenagers
