No Additional Materials are required.

## READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.
Write in dark blue or black pen.
You may use an HB pencil for any diagrams, graphs or rough working.
Do not use staples, paper clips, glue or correction fluid.
DO NOT WRITE IN ANY BARCODES.

Answer all questions.
No marks will be awarded for using brand names of software packages or hardware.

At the end of the examination, fasten all your work securely together.
The number of marks is given in brackets [ ] at the end of each question or part question. The maximum number of marks is 100

3 A hospital holds records of its patients in a database. Four of the fields are:

- date of visit (dd/mm/yyyy)
- patient's height (m)
- 8-digit patient ID
- contact telephone number

The presence check is one possible type of validation check on the data. For each field, give another validation check that can be performed. Give an example of data which would fail your named validation check.

A different validation check needs to be given for each field.

| field name | name of validation check | example of data which would <br> fail the validation check |

| date of visit |  |  |
| patient's height |  |  |

4 The diagram below shows a number of descriptions and terms used in computer security.
By drawing arrows, connect the correct description to the computer security term.

Program installed on a PC to gather data about the user. It monitors every key press and relays the data back to the home base.

Junk (unsolicited) electronic mail advertising products and services sent to a general mailing list.

Sending an email that claims to be from a legitimate company; the recipient is then directed to a bogus website where their personal details will be collected.

Malicious code installed on a PC or on a server. This code directs users to a fraudulent website without their knowledge.

Act of locating and possibly exploiting a wireless network by touring an area. This requires a laptop with relevant software and an antenna

Information that a website stores about a user on the user's hard disk; this enables the website to remember details about the user when they next visit the website.

11 Dima has decided to change his dial-up modem for a broadband modem.
(a) Give two advantages of doing this.

1 $\qquad$
$\qquad$
2 $\qquad$
(b) Dima has agreed to send Michaela a 20 megabyte file. They both have a broadband connection.
Dima has to upload his file to a server and then Michaela needs to download it from the same server.

The broadband data transfer rates (speeds) are:
1 megabits per second to upload a file 8 megabits per second to download a file
(Note: 8 bits $=1$ byte)

12 A digital light meter has a 3-digit LCD. The value of each digit on the instrument display is stored as a 4-bit binary number in a register.

For example:

| 0 | 1 | 0 | 1 |
| :--- | :--- | :--- | :--- |
| $Z$ |  |  |  |

(a) What value is shown on the display if the 4-bit binary registers contain:

(b) What would be stored in the 4-bit binary registers if the display shows:

(c) If any of the 4-bit binary registers $\mathrm{X}, \mathrm{Y}$ or Z contain the value 1111 this indicates an error.
(i) How could this error be shown on the instrument display?
$\qquad$
(ii) What could cause an error to occur?

13 A heating system is being controlled by sensors and a computer. The temperature must be kept between $15^{\circ} \mathrm{C}$ and $25^{\circ} \mathrm{C}$. If $30^{\circ} \mathrm{C}$ is exceeded a warning message is generated and the system shuts down.

A flowchart of the process is shown below. Some of the items are missing.
Complete the flowchart, using item number only, from the list of items given.

(Population (millions) < 4.0) OR (Number of houses (millions) <4.0)
Using Ref only, write down which records will be found.

15 A survey is being carried out which involves reading and recording sound levels near a busy road junction. Once all the data are collected, they are input manually into a computer. A sound level of 0 decibels $(0 \mathrm{~dB})$ is input to indicate the end of the data.

Write an algorithm, using pseudocode or a flowchart, which:

- inputs all the sound levels
- after a sound level of 0 is input, outputs the following:
- average sound level
- highest recorded sound level.
