## MARK SCHEME

Maximum Mark: 75

## Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.
Cambridge is publishing the mark schemes for the October/November 2016 series for most Cambridge IGCSE ${ }^{\circledR}$, Cambridge International A and AS Level components and some Cambridge O Level components.

| Page 2 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | Cambridge International AS/A Level - October/November 2016 | 9608 | 23 |

1 (a)

Note: Order of 11, 10
and 7,8 may be
reversed.

| Page 3 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | Cambridge International AS/A Level - October/November 2016 | 9608 | 23 |

One mark for each of the following symbols / symbol combinations:

- 2
- 7 and 8 from YES
- 10 and 11
- 6
- 1 and 3 (1 from NO, 3 from YES)
- 9
- 12 and 4
(b) Rows 2 to $\mathbf{7}$ are examples only

| TicketType | BaggageWeight | Explanation | Expected <br> output |
| :--- | :--- | :--- | :--- |
| E | 15 | Under the <br> allowance | 0 |
| E | $>16$ | Under the <br> allowance | Charge |
| S | $<=20$ | Under the <br> allowance | 0 |
| S | 16 | Under the <br> allowance | Charge |
| E | 20 | Boundary <br> weight for a <br> type E ticket | 0 |
| S | Boundary <br> weight for a <br> type S ticket | 0 |  |
| E or S | negative or non- <br> numeric | Invalid weight | Error message |

| Ticket type | Baggage allowance <br> $(\mathbf{k g})$ | Charge rate per additional $\mathbf{~ k g}$ <br> $\mathbf{( \$ )}$ |
| :---: | :---: | :---: |
| ' ${ }^{\prime}$ | 16 | 3.50 |
| ' $\mathbf{S}$ ' | 20 | 5.75 |

One mark for each different test (examples above)

| Page 4 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | Cambridge International AS/A Level - October/November 2016 | 9608 | 23 |

(c) INPUT TicketType

WHILE NOT (TicketType = 'E') OR (TicketType = 'S')
INPUT TicketType
ENDWHILE
One mark for each of:

- WHILE . . . ENDWHILE
- Correct condition in a loop
- INPUT within loop plus one before loop // alternative arrangement leading to correct exit from loop

2 (a)

|  | Status2 | ReadingCount | ThisBit | BitCount | OUTPUT |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | 0 |  |
|  | 1 | 1 | 1 | 1 |  |
|  |  | 2 | 0 | 1 |  |
|  |  | 3 | 1 | $2$ |  |
| 1 must 'follow' 6 as shown by arrow. Can have only 1 or nothing above. |  |  | 1 | 3 |  |
|  |  | - 5 | 1 | 4 |  |
|  |  |  | 0 |  |  |
|  |  | 1 | 1 | 5 | Error Investigate |
|  |  |  |  | 0 |  |
|  |  | 2 | 1 | 1 |  |
|  |  |  | 0 | 1 |  |
| 0 must 'follow' 6 as shown by arrow. Can have only 1 or nothin above. |  | n 4 | 0 | 1 |  |
|  |  | ing 5 | 1 | 2 |  |
|  |  |  | 1 | $3$ |  |
|  |  |  |  |  |  |

One mark per area outlined

| Page 5 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | Cambridge International AS/A Level - October/November 2016 | 9608 | 23 |

(b) One mark for each of:

- Assignment: 01 // 02 // 06 // 09 // 14 // 18
- Selection: $07 / / 11$
- Iteration: 03 // 05

3 (a) (i) 7
(ii) 103
(iii) 'K'
(iv) "come"
(b) (i) PROCEDURE CalculateCustomerID

OUTPUT "Key in surname"
INPUT Surname
Length $\leftarrow$ CHARACTERCOUNT (Surname)
CustomerID $\leftarrow 0$
FOR i $\leftarrow 1$ TO Length
//NextChar is a single character from Surname
Nextchar $\leftarrow 1$ SUBSTR(Surname, i, 1) // ONECHAR(Surname, i)
NextCodeNumer $\leftarrow$ ASC (NextChar)
CustomerID $\leftarrow$ CustomerID + NextCodeNumber
ENDFOR
OUTPUT "Customer ID is ", CustomerID
ENDPROCEDURE
One mark per phrase in bold

| Page 6 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | Cambridge International AS/A Level - October/November 2016 | 9608 | 23 |

(ii) 'Pseudocode' solution included here for development and clarification of mark scheme. Programming language example solutions appear in the Appendix.

```
PROCEDURE CalculateCustomerID
    DECLARE Surname : STRING
    DECLARE NextChar : CHAR
    DECLARE NextCodeNumber, i, CustomerID, SLength : INTEGER
    OUTPUT "Key in surname"
    INPUT Surname
    SLength \leftarrow LEN(Surname)
    CustomerID \leftarrow 0
    FOR i \leftarrow 1 TO SLength
        //NextChar is a single character from Surname
        Nextchar \leftarrow MID(Surname, i, 1)
        NextCodeNumber \leftarrow ASC(NextChar)
        CustomerID \leftarrow CustomerID + NextCodeNumber
    ENDFOR
    OUTPUT "Customer ID is ", CustomerID
ENDPROCEDURE
```

Mark as follows:

- Declaration of Surname as STRING and NextChar as CHAR and any three INTEGERs
- Prompt and Input
- Calculation of string length
- FOR Loop to process all characters in the string
- Assignment to NextChar in a loop
- Assignment to NextCodeNumber in a loop
- Totalling CustomerID in a loop
- Output following a loop
(c) (i) Visual Basic

Function CalculateCustomerID(ByVal AnyName AS STRING) As Integer

## Pascal

FUNCTION CalculateCustomerID (AnyName : STRING) : INTEGER
Python
def CalculateCustomerID (AnyName):
Mark as follows:

- Correct keyword + Function name
- Single input parameter of correct type
- Return parameter type
(ii) Visual Basic

Return customerID // CalculateCustomerID = CustomerID
Pascal
Result := CustomerID // CalculateCustomerID := CustomerID
Python
Return CustomerID

| Page 7 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | Cambridge International AS/A Level - October/November 2016 | 9608 | 23 |

(iii) Visual Basic

ThisID = CalculateCustomerID ("Wilkes")
Pascal
ThisID := CalculateCustomerID ('Wilkes')
Python
ThisID = CalculateCustomerID ("Wilkes")
One mark per underlined element
(d) (i) - Built-in functions are made available by the programming language / already in the system

- Built-in functions are ready made and tested
- User-defined functions can be modified // built-in cannot be modified
- User defined functions can be designed to meet the user's requirements
- User-defined functions can only be used in that program / module
[Max 2]
(ii) - They have an identifier name
- They return a value
- They have none, one or more arguments
- Both perform a specific task
- Both represent re-usable code
- Both are 'called'

4 (a) - Create / modify the source code using the text editor

- Compiler translates the source code
- Compiler produces the object code
(b) (i) - Errors in keywords are highlighted // before the compilation process
- Provides line-by-line syntax checking as code is typed in
- Provides line number of the error
- Display of known identifier names
- Auto-complete
- Colour-coding
- Auto-indent
- type checking
- Subroutine parameter checking
(ii) - Set break-points
- Single step / step into/over subroutine
- Window to watch the changing value of variables

| Page 8 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | Cambridge International AS/A Level - October/November 2016 | 9608 | 23 |

(c) (i) OPEN "PRODUCTS" FOR READ
$i \leftarrow 1$
WHILE NOT EOF("PRODUCTS")
READFILE ("PRODUCTS", PCode[i])
READFILE ("PRODUCTS", PDescription[i])
READFILE ("PRODUCTS", Temp // PRetailPrice[i])
PRetailPrice[i] $\leftarrow$ TONUM (Temp)
$i \leftarrow i+1$
ENDWHILE
CLOSE "PRODUCTS"
OUTPUT "Product file contents written to arrays"
One mark per bold phrase (three READFILE() counts as a single mark)
(ii) Benefit:

- The number of file read operations is reduced (by $2 / 3 \mathrm{rds}$ )
- It may use less storage / space in the file if strings are NOT fixed length
- All the data related to a single product is read at once / in one file operation / grouped together

Drawback:

- The program will need to use the string handling functions to isolate each of the three items of data
- Difficult to isolate data items if the format is not consistent
- More difficult to search

Max one benefit and one drawback

| Page 9 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | Cambridge International AS/A Level - October/November 2016 | 9608 | 23 |

(d)

One mark per group (one or more names) as follows:
A: SearchCode
B: SearchCode // ThisIndex
C: ThisRetailPrice, ThisDescription
D: SearchCode, ThisDescription, ThisRetailPrice

| Page 10 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | Cambridge International AS/A Level - October/November 2016 | 9608 | 23 |

(e) 'Pseudocode' solution included here for development and clarification of mark scheme. Programming language example solutions appear in the Appendix.

```
FUNCTION ProductCodeSearch(AnyName : String) RETURNS : Integer
    DECLARE FoundPos : Integer
    DECLARE i : Integer
    i}\leftarrow
    FoundPos \leftarrow -1
    REPEAT
        IF AnyName = PCode[i]
            THEN
                FoundPos \leftarrow i
        ELSE
            i}\leftarrow i + 1
        ENDIF
    UNTIL (i = 1001) OR (FoundPos <> -1)
    RETURN FoundPos
```

## ENDFUNCTION

Mark as follows:

- Function header returns INTEGER
- Initialisation of index variable
- Loop through array PCode (including exit when found)
- Comparison of AnyName with PCode[i] in a loop
- Increment index variable in a loop
- Return index if AnyName found AND return -1 if AnyName not found
[Max 6]

5 (i) $13 / 13.0$
(ii) 18.6
(iii) TRUE
(iv) 32
(v) 22
*** End of Mark Scheme - Example program code solutions follow ***

|  | Cambridge International AS/A Level - October/November 2016 | 9608 | 23 |

## Appendix - Example program code solutions

## 3(b)(ii): Visual Basic

```
Dim Surname As String
Dim NextChar As Char
Dim NextCodeNumber As Integer
Dim i As Integer
Dim CustomerID As Integer
Dim SLength As Integer
Console.Write("Key in surname ")
Surname = Console.ReadLine
SLength = Len(Surname)
CustomerID = 0
    For i = 1 To SLength
        \\ NextChar is a single character from surname
        NextChar = Mid(Surname, i, 1)
        NextCodeNumber = Asc(NextChar)
        CustomerID = CustomerID + NextCodeNumber
    Next
    Console.WriteLine("Customer ID is " & CustomerID)
```

## 3(b)(ii): Pascal

```
Var Surname : string;
    SLength, i, CustomerID, NextCodeNumber : integer;
    NextChar : char;
begin
    Writeln ('Enter the surname: ');
    Readln (Surname);
    SLength := Length(Surname);
    CustomerID := 0;
    For i := 1 to SLength do
        begin
            NextChar := SurName[i];
            NextCodeNumber := Ord(NextChar);
            CustomerID := CustomerID + NextCodeNumber;
            end;
    Writeln ('Customer ID is ', CustomerID);
    Readln;
end.
```

| Page 12 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | Cambridge International AS/A Level - October/November 2016 | 9608 | 23 |

## 3(b)(ii): Python

```
# Surname String
# NextChar Char
# NextCodeNumber, I, CustomerID, SLength Integer
Surname = input("Key in Surname ")
SLength = len(Surname)
CustomerID = 0
for i in range(SLength):
    # NextChar is a single character from surname
    NextChar = Surname[i]
    NextCodeNumber = ord(NextChar)
    CustomerID = CustomerID + NextCodeNumber
print("Customer ID is " + str(CustomerID))
```

## 4(e): Visual Basic

```
Function ProductCodeSearch(ByVal SearchCode As String) As Integer
    Dim FoundCode As Integer
    Dim i As Integer
    i = 1
    FoundCode = -1
    Do
        If SearchCode = PCode(i) Then
            FoundCode = i
        Else
            i = i + 1
        End If
    Loop Until i = 1001 Or FoundCode <> -1
    Return FoundCode
End Function
```

| Page 13 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | Cambridge International AS/A Level - October/November 2016 | 9608 | 23 |

## 4(e): Pascal

```
Function ProductCodeSearch (SearchCode : String): integer;
    var FoundCode, ThisIndex : integer;
        Found : Boolean;
    Begin
        Found := false;
        ThisIndex := 1;
        Repeat
        If SearchCode = PCode[ThisIndex] then
            Begin
                FoundCode := ThisIndex;
                Found := true;
                Else
                    ThisIndex := ThisIndex + 1;
                end;
    Until (ThisIndex = 1001) OR (Found);
    If Found = false then
        FoundCode := -1
    ProductCodeSearch := FoundCode;
end.
```

## 4(e): Python

```
def ProductCodeSearch(SearchCode):
    # list indexes start at zero
    i = 0
    Found = "no"
    while not(i == 1001 or Found == "yes"):
        if SearchCode == PCode[i]:
            Found = "yes"
            FoundIndex = i
        else:
            i = i + 1
    if Found == "no":
        FoundIndex = -1
    return FoundIndex
```
