UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Subsidiary and Advanced Level

www.papacambridge.com MARK SCHEME for the November 2004 question paper

9698 PSYCHOLOGY

Paper 1 (Core Studies 1), maximum raw mark 100 9698/01

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which Examiners were initially instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published Report on the Examination.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the Report on the Examination.

CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the November 2004 question papers for most IGCSE and GCE Advanced Level syllabuses.

Grade thresholds taken for Syllabus 9698 (Psychology) in the November 2004 examination.

				47.5	M. P.
hresholds taken f ation.	for Syllabus 96	98 (Psycholog	gy) in the Nove	ember 2004	M. Papa Cambridge .com
	maximum	minimum	mark required	for grade:	.62
	mark available	А	В	Ē	3
Component 1	100	74	64	38	

The thresholds (minimum marks) for Grades C and D are normally set by dividing the mark range between the B and the E thresholds into three. For example, if the difference between the B and the E threshold is 24 marks, the C threshold is set 8 marks below the B threshold and the D threshold is set another 8 marks down. If dividing the interval by three results in a fraction of a mark, then the threshold is normally rounded down.

Section A

Cambridge.com The study by Deregowski is a review of studies on picture perception in differen 1 cultures.

(a) Describe the finding of one cross-cultural study included in the Deregowski review.

Any study (anecdotal or empirical) included in the Deregowski review. Includes reports by: Robert Laws; Mrs Fraser, 'other reports'; Hudson's studies on antelope/elephant/man, 'two-pronged trident', cube construction; preference for split-style.

1 mark description of study only, 2 marks study plus finding. [2]

Say whether this finding supports either the nature or the nurture point of (b) view and explain why.

All findings support the nurture viewpoint as all show that aspects had to be learned before they could be perceived.

1 mark partial, 2 marks full.

[Total 4] [2]

2 In the study by Baron-Cohen, Leslie and Frith on autism, give four features that can be used to identify autism.

Most likely answers:

No theory of mind; Poor verbal and non-verbal communication; Repetitive behaviour; Like routine; etc.

1 mark for each.

No credit for naming question etc.

[4 x 1] [Total 4]

3 In project Washoe by Gardner and Gardner one aspect of Washoe's signing was her ability to show transfer.

In this study what is meant by transfer? (a)

Transfer: the use of one sign for all variations. From the text "...transfer her signs spontaneously to new members of each class of referrents". E.g. sign for flower transferred to all flowers whether indoor, outdoor or in pictures.

1 mark for partial definition/explanation.

2 marks for full explanation.

Page 2	Mark Scheme	Syllabus
	AS/A LEVEL – NOVEMBER 2004	9698
(b)	Give <u>one</u> example of Washoe's signing that showed	transfer.
	One is sign for flower as flowers occur indoors, outdoors Second is dog - sign used when dog barks. Third is 'key' sign which was used for all keys and locks.	Sec.
	1 mark for naming (e.g. flower)	

(**b**) Give <u>one</u> example of Washoe's signing that showed transfer.

2 marks for example and explanation.

4 From the study by Hodges and Tizard on social relationships, the ex-institutional children were matched with a comparison group:

(a) Name two ways in which the children were matched.

Ex-institutional and comparison groups matched on: age, sex, one-or two-parent family, occupational classification of main breadwinner, position in family. Name only required.

1 mark for each.

In any psychological study, why are participants matched? (b)

To control as many participant and other variables as possible.

1 mark partial, 2 marks full.

[2] [Total 4]

[2]

[1+1]

[Total 4]

5 From the study by Bandura, Ross and Ross on the imitation of aggression:

Give two types of behaviour (the response categories) that the observers (a) looked for when they observed the children.

Any two from:

imitative physical; imitative verbal; imitative non-aggressive verbal; mallet aggression; sits on bobo; punches bobo; non-imitative aggression; aggressive gun play.

Identification only for name only required

1 mark for each. No marks for non-response categories e.g. 'physical aggression' [1+1]

	AS/A LEVEL – NOVEMBER 2004	9698	12

The study by Haney, Banks and Zimbardo was stopped early because 11 negative reactions of the prisoners due to pathological prisoner syndro Briefly describe two features of pathological prisoner syndrome.

aCambridge.com Pathological prisoner syndrome includes perceived loss of identity (name, dress, etc.) and arbitrary control of their lives (invasion of privacy, constant surveillance and atmosphere of oppression)

1 mark partial, 2 marks full for each

[2+2] [Total 4]

12 In Tajfel's study on intergroup discrimination:

Briefly describe the participants (a)

Sample: 64 boys, aged 14-15 years old from one school in Bristol, England. Taken to laboratory in groups of eight; all knew each other.

1 mark for each feature, up to 2 marks maximum [2]

(b) Outline <u>one</u> way in which the participants were put into groups.

Categorised by:

under- or over-estimation of dots; artistic preference; allocated randomly.

2 marks

[Total 4] [2]

13 The following questions are taken from the IQ test described in the study by Gould:

Washington is to Adams as first is to.....; Crisco is a: patent medicine, disinfectant, toothpaste, food product; Christy Mathewson is famous as a: writer, artist, baseball player, comedian.

(a) Identify two groups of people who scored badly on the tests.

Most likely: any two groups of immigrants or those who could not read

1 mark for naming each of two groups. [2]

(b) Explain one example of cultural bias in the questions.

Any appropriate comment about needing experience in the US in order to know what the questions are about.

1 mark partial, 2 marks full

[2] [Total 4]

		Most likely:	Sim
		In 1020 block children proferred white delle:	

14 The study by Hraba and Grant on doll choice in 1969 repeated the study Clark and Clark in 1939.

(a) Outline one finding that was different.

- In 1939 black children preferred white dolls;
- In 1969 black children preferred black dolls.
- In 1939 lighter skinned children were more likely to see themselves as white;
- In 1969 they saw themselves as white.

Differences on items 1-4.

1 mark partial, 2 marks full.

[2]

(b) Outline one finding that was the same.

Most likely:

Both black and white children correctly identified white and 'coloured' dolls (question items 5 and 6) and item 7 correct identification was comparable. White children always preferred white dolls.

1 mark partial, 2 marks full.

[2] [Total 4]

15 In the study on multiple personality disorder, Thigpen and Cleckley carried out a number of tests. Briefly describe the findings of two of these tests.

Tests:

IQ test [white 110; black 104]; Memory test [black= same as IQ; white = far above IQ]; Rorschach [white = anxiety and obsessive/compulsive traits and repression, black = hysterical tendency and regression]; EEG [black = 12.5 cps, white 11cps].

1 mark partial, 2 marks full.

No credit for mere identification of test.

Partial/full answer

- 0 marks no answer or incorrect answer
- 1 mark partially correct answer or correct but incomplete lacking sufficient detail or explanation to demonstrate clear understanding
- 2 marks correct answer with sufficient detail/explanation to demonstrate clear understanding

[2+2] [Total 4]

Section B

Cambridge.com Some studies in psychology describe behaviour and experience using number 16 and statistics. This is the quantitative approach.

Choose any one of the studies from the list below and answer the questions which follow.

Loftus and Palmer (eyewitness testimony) Samuel and Bryant (conservation) Dement and Kleitman (sleep and dreaming)

Outline the procedure of your chosen study. (a)

Loftus:

Study 1 p's watch video clip then receive one of five words. Study 2 asked Q then return one week later. Asked 'Did you see broken glass?'

Samuel:

Children presented with two question formats and fixed array control, using volume mass and number for pre-transformation, transformation and posttransformation.

Dement:

Electrodes attached, p's woken during REM and asked to recall dream. Several variations involving estimated length of dream and words used.

No answer or incorrect answer

[0]

Anecdotal evidence, general statements, minimal detail, minimal focus. [1-3]

Attempt to outline some of main findings though with omission of detail or lack of clarity (comment with some comprehension). [4-6]

Main findings identified and described in good detail. Outline is clear, focused and well expressed. Good selection of findings. [7-10]

			2.
Page 8	Mark Scheme	Syllabus	. A.
	AS/A LEVEL – NOVEMBER 2004	9698	12

(b) Describe the quantitative results of your chosen study.

Loftus:

Cambridge.com Study 1: p's with word 'smashed' = estimated speed at 40.8 mph, decreasing trend to contacted with 31.8 mph

Study 2: lots of p's said they saw broken glass that did not exist. Specific numbers in study >> tables, graphs and statistics.

Samuel:

Age: children of 5 and 6 years could conserve.

Material: number easiest; volume saw most errors.

Question: one question fewer errors than two question. FA control most errors. Specific numbers in study >> tables, graphs and statistics.

Dement:

152 p's report dream from REM, 39 do not; 11 dream in NREM, 149 no dream from NREM. Also significant correlations between REM duration and number of words in dream narrative. Also 45 of those woken after 5 minutes said 5 minutes but 6 said 15 minutes; 47 woken after 15 minutes said 15 minutes, 13 said 5 minutes >> tables, graphs and statistics.

No answer or incorrect answer. [0]

Anecdotal description of generalisations, brief detail, minimal focus. [1-3]

Appropriate generalisations identified, description shows some understanding.

Some detail and expansion of generalisations. [4-6]

Appropriate generalisations identified.

Description is clear, has good understanding, is focused and well expressed.

Good detail each generalisation explained fully. [7-10]

Psychologists sometimes gather data about behaviour and experien 17 observing the ways in which people behave. Such observations may be don a laboratory or in a natural environment.

Cambridge.com Choose any one of the studies from the list below and answer the questions which follow.

Rosenhan (sane in insane places) Piliavin, Rodin and Piliavin (subway samaritans) **Bandura (aggression)**

Describe how observational data was gathered in your chosen study. (a)

Rosenhan:

Pseudopatients gain access to mental institutions then as participant observers record the behaviour of ward staff.

Piliavin, Rodin and Piliavin:

On train, victim becomes ill or drunk. Observers in carriage record behaviour of passengers on train.

Bandura:

Children observed through one-way mirror in controlled observation. Behaviour recorded and inter-rater reliability applied.

No answer or incorrect answer.

[0]

Anecdotal evidence, general statements, minimal detail, minimal focus. [1-3]

Attempt to outline some of main findings though with omission of detail or lack of clarity (comment with some comprehension). [4-6]

Main findings identified and described in good detail. Outline is clear, focused and well expressed. Good selection of findings. [7-10]
