

Cambridge International Examinations

Cambridge International General Certificate of Secondary Education

CANDIDATE NAME			
CENTRE NUMBER		CANDIDATE NUMBER	
CO-ORDINATE			0654/33
Paper 3 Theory	(Core)		May/June 201

2 hours

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

A copy of the Periodic Table is printed on page 28.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

1 Fig. 1.1 shows a diagram of a cross-section through an artery.

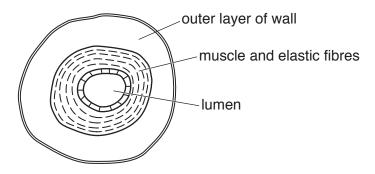

Fig. 1.1

- (a) Blood vessels have structural adaptations depending on their function.
- (b) Table 1.1 shows some of the blood vessels carrying blood to and from the body's organs.
 Complete Table 1.1 with the names of the blood vessels.

Table 1.1

organ	blood vessel bringing blood to the organ	blood vessel taking blood away from the organ
heart		aorta
kidney	renal artery	
liver		hepatic vein
lungs		

[4]

2	(a)	(i)	State one physical property of all metals.	
		(ii)	Name the collection of metals in the Periodic Table that includes copper.	-
	((iii)	State two properties of copper that are not typical properties of all metals.	1]
	`	()	1	
			2	
				2]
	(b)		2.1 shows apparatus a teacher uses to obtain copper by heating a mixture of copper le and carbon.	r
			mixture of copper oxide and carbon solution J	
			Fig. 2.1	
		(i)	In this reaction, carbon dioxide gas is also produced.	
			Construct the word equation for the reaction between copper oxide and carbon.	
			+	
			[1]
		(ii)	Identify which substance is oxidised during this reaction.	
			Explain your answer.	
			substance	
			explanation	

[2]

(iii) Solution J is used to test for carbon dioxide.

Name solution ${\bf J}$ and describe the change in its appearance when it reacts with carbon dioxide.
solution J
ahanga

[2]

3 Fig. 3.1 shows a boat pulling a water skier across a lake.

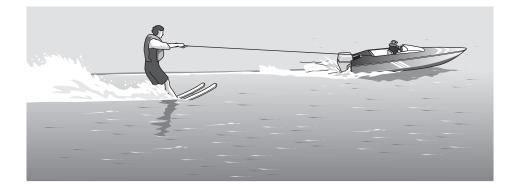

Fig. 3.1

(a) Fig. 3.2 shows the speed-time graph for the water skier over a 50 second period.

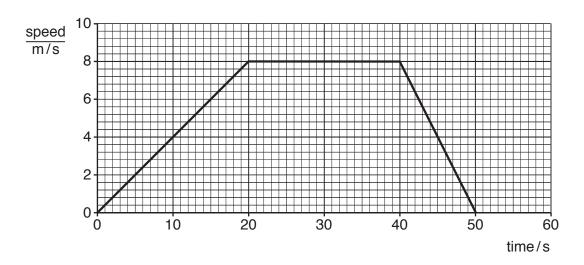

Fig. 3.2

- (i) On the graph in Fig. 3.2, mark with a letter **X** a point when the water skier is not moving. [1]
- (ii) On the graph in Fig. 3.2, mark with a letter **M** a point when the water skier is travelling at maximum speed. [1]
- (iii) Determine the number of seconds the water skier is travelling at maximum speed.

0	[1]
 5	[י]

(b) Fig. 3.3 shows the two horizontal forces acting on the water skier.

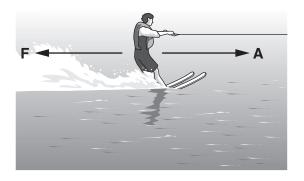

Fig. 3.3

A forward force **A** acts along the rope from the boat.

A frictional force **F** caused by air resistance and water resistance acts in the opposite direction.

Place a tick (\checkmark) in the box next to the statement that correctly describes the relative sizes of forces **A** and **F** when the skier is accelerating forwards.

Force A is greater than force F .	
Force A is equal to force F .	
Force A is less than force F .	[1]

(c) The boat produces waves on the surface of the lake. This is shown in Fig. 3.4.

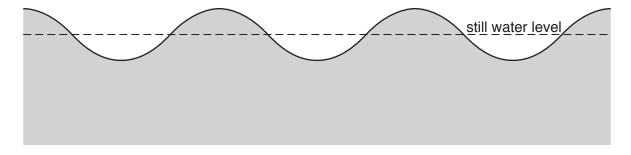

Fig. 3.4

(i) On Fig. 3.4, use a double headed arrow (←→) to show the wavelength of a wave. [1]
 (ii) State what is meant by the *amplitude* of a wave.

(d) Use the words in the list to complete the labels on the diagram in Fig. 3.5 to describe the energy changes that occur in the engine of the boat.

Each word may be used once, more than once or not at all.

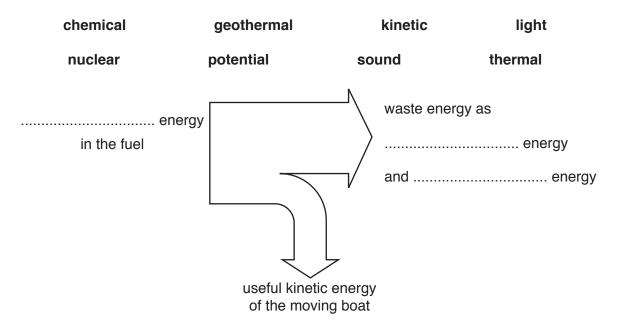

Fig. 3.5

[2]

(e) When the water skier has finished skiing, he dries himself off in the sun by allowing the water on his body to evaporate.

molecules.						
	 	 	 	 		[3
						_

4 A person exercises for 30 minutes. Their internal body temperature during this time is recorded.

Table 4.1 shows the results.

Show your working.

Table 4.1

time/minutes	temperature/°C
0	36.8
10	37.5
20	38.8
30	39.4

(a)	(i)	Use Table 4.1 to calculate the difference in internal body temperature between the start
		and the end of exercise.

		temperature°C [1]
	(ii)	Predict what happens to the internal body temperature after the exercise stops.
		[1]
(b)	Inte	ernal body temperature increases during exercise.
	Des	scribe the changes in the skin that occur when the body gets too hot.
		[2]
(c)		ernal body temperature increases during exercise due to the increased rate of respiration cells.
	-	plain why the increased rate of respiration causes the internal body temperature to rease.

(d)	Pulse rate also increases during exercise.
	Describe the changes that happen to the heart which increase pulse rate.
	[4]

- 5 Sodium is a metal in Group I of the Periodic Table.
 - (a) A teacher adds a piece of sodium to a beaker of distilled, pH-neutral water.

The water contains full-range indicator (Universal Indicator).

This is shown in Fig. 5.1.

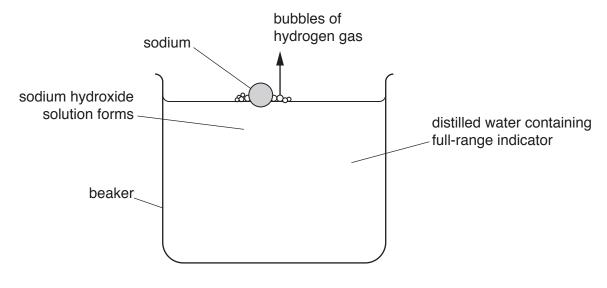

Fig. 5.1

	•	
(i)	State the indicator colour change that shows that an alkaline solution is forming in reaction.	this
	from to	[2]
(ii)	Suggest the change in pH of the liquid in the beaker when sodium reacts with water.	
	from to	[1]
(iii)	The reaction between sodium and water also produces hydrogen gas.	
	Describe the test for hydrogen.	
	test	
	result	
		[1]
(iv)	Describe how the teacher can show that the reaction between sodium and water exothermic.	r is
		[2]

(b)	(1)	Chlorine is an element in Group VII of the Periodic Table.
		State the type of chemical bond in sodium chloride.

......[1

(ii) Fig. 5.2 shows a process that separates the elements combined in copper chloride.

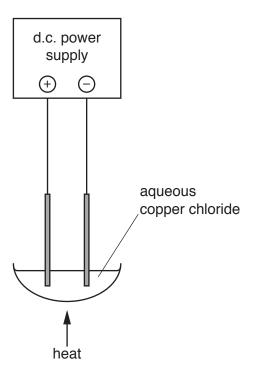

Fig. 5.2

Name this process.

.....[1]

(iii) Use a label line and the letter **A** to label the anode in Fig. 5.2. [1]

(iv) State the non-metallic element produced during the process in Fig. 5.2.

.....[1]

6 An astronaut is living on the International Space Station (ISS).

The astronaut uses a telescope to view a star.

(a) Fig. 6.1 shows a lens that is used in the telescope.

Light rays from the star pass through the lens and a clear image of the star is formed, 10 cm from the lens, at point **P**.

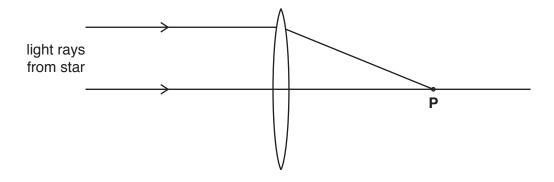

Fig. 6.1

(i) State the focal length of the lens.

 	 cm [1]

(ii) Name point P.

.....[1]

(b) Different types of telescope detect different radiations within the electromagnetic spectrum.

Fig. 6.2 shows the electromagnetic spectrum.

γ-rays	A	ultraviolet	visible light	В	microwaves	radio waves	
--------	---	-------------	------------------	---	------------	----------------	--

Fig. 6.2

(i) Identify A and B in Fig. 6.2.

Α	
В	
_	[2]

(ii) State the part of the electromagnetic spectrum that has the highest frequency.

_____[1]

(c)	The	astronaut communicates with Earth using radio waves.
	The	International Space Station (ISS) is 400 km above the Earth in space.
	(i)	Radio waves travel at a speed of 300 000 km/s.
		Calculate the time taken for a radio signal to travel from the ISS to Earth.
		State the formula you use and show your working.
		formula
		working
		time = s [2]
	(ii)	State one reason why it is impossible to use sound waves for communication between the astronaut and Earth.
		[1]
(d)	The	ISS has several solar panels which convert solar energy to electricity.
	Sola	ar energy is a renewable energy source.
	(i)	State one other renewable energy source on Earth.
		[1]
	(ii)	State one non-renewable energy source on Earth.
		[1]

7 Fig. 7.1 shows a cross-section through a flower.

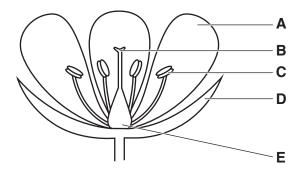

Fig. 7.1

			•	
(a)	Us	ing the letters from Fig. 7.1, identify	the parts of the flower that ha	ve the following functions.
	attı	racting insects for pollination		
	pro	oducing ovules		
	pro	oducing pollen		
	pro	tecting the plant when in bud		[4]
				[4]
(b)	Se	xual reproduction in the flower invo	lves pollination and the produ	ction of seeds.
	On	e way in which pollen is transferred	d is by animals such as insect	S.
	(i)	Name one other way in which po	llen can be transferred to the	flower from another plant.
				[1]
	(ii)	Tick (✓) the boxes of all the state	ements that describe sexual r	eproduction.
		all offspring are genetically identic	al to each other	
		involves gametes		
		involves the fusion of nuclei		
	•	offspring are genetically identical t	to the parents	
		produces genetically dissimilar off	spring	
	•	requires only one parent		
	L			[3]

Please turn over for Question 8.

8	(a)	Brass	is a	mixture	of	copper	and	zinc

	(i)	State the term used for a mixture of metals.	
	(ii)	State one physical property that will be different in brass and copper.	
(b)		forms rust.	-
	⊢ хр	lain why painting iron prevents rusting.	

(c) A student uses the apparatus shown in Fig. 8.1 to investigate the rate of reaction between magnesium and dilute sulfuric acid.

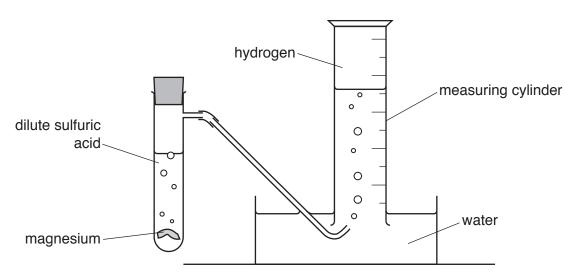

Fig. 8.1

(i) It takes 50 seconds for 25 cm³ of hydrogen gas to collect in the measuring cylinder.
Calculate the average volume of hydrogen gas that is produced each second.
Show your working.

volume = cm³ [1]

	(11)	reaction.	lilis
		1	
		2	
			[2]
(d)	The sulfa	e reaction between magnesium and dilute sulfuric acid produces the salt, magnesi ate.	um
		te two magnesium compounds that can react with dilute sulfuric acid to produgnesium sulfate.	ıce
	1		
	2		
			[2]

(a)	A pi	ece of metal expands when it is heated.	
	(i)	State one example where the expansion of a metal is useful.	
			[1]
	(ii)	State one example where the expansion of a metal is a problem.	
			[1]
(b)	A pi	ece of aluminium has a mass of 40.5 g and a volume of 15.0 cm ³ .	
	Cal	culate the density of the piece of aluminium.	
	Stat	te the formula you use, show your working and state the units of your answer.	
	forn	nula	
	wor	king	
		density = units	[3]
(c)	An i	sotope of aluminium has a nuclide notation ²⁸ ₁₃ A <i>l</i> .	
	Stat	re the number of protons and neutrons present in an atom of this isotope.	
	prot	ons	
	neu	trons	[2]
			[4]
(d)	Aluı	ninium has several isotopes.	
	Stat	te the way in which these isotopes differ from each other.	
			[1]

(e) Table 9.1 shows information about four pieces of aluminium wire.

Table 9.1

wire	length/cm	diameter/mm
J	50	6
K	50	12
L	100	6
М	100	12

Deduce which wire, J, K, L or M, has the least resistance.
Explain your answer.
wire has the least resistance
explanation
[2]
A current of 5000 A passes through wire \boldsymbol{L} when a potential difference of 6 V is applied across it.
Calculate the resistance of wire L .
State the formula you use and show your working.
formula
working
resistance = Ω [2]

10 Fig. 10.1 shows the activity of an enzyme at different temperatures.

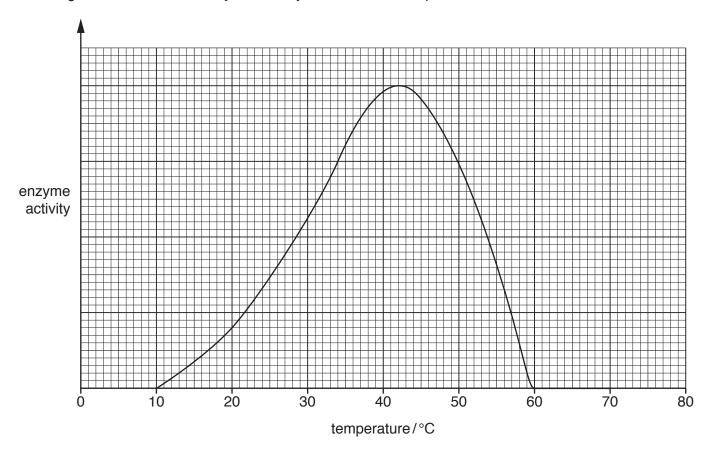

Fig. 10.1

(a)	(i)	Using Fig. 10.1, state the optimum temperature for this enzyme.	
		°C	[1
	(ii)	Using Fig. 10.1, state a temperature where there is no enzyme activity.	
		°C	[1
(b)	Sug	ggest why most enzymes in the body have an optimum temperature of 37°C.	
			[1

(c) The boxes on the left show some substrates.

The boxes in the middle show some digestive enzymes.

The boxes on the right show some products of digestion.

Draw three lines to link each substrate with its correct enzyme, and three lines to link each enzyme with its correct product.

	substrate	enzyme	product
	fat	amylase	amino acids
	protein	protease	glucose
	starch	lipase	glycerol and fatty acids
			[3]
(d)	Describe the role of	enzymes in the process of dig	estion.
			[3]
			[0]

11	(a) (i)	State the process used to obtain gasoline from petroleum.	
			[1]
	(ii)	Gasoline is a mixture of compounds.	
		Name the two elements combined in these compounds.	
		and	[1]
	(iii)	Name one other useful product separated from petroleum.	
		State one use of this product.	
		product	
		use	
			[2]
	(b) Alka	anes are changed into alkenes by cracking.	
	alkane •	catalyst cracking reaction vessel mixture containing alkenes Fig. 11.1	
	(i)	The cracking reaction in Fig. 11.1 involves a catalyst.	
	(7)	Define the term <i>catalyst</i> .	
	(ii)	Describe how the mixture produced by cracking can be tested to show that it contain alkenes.	
		test	
		result	

[2]

(c) (i) Complete Fig. 11.2 to show the molecular structure of one molecule of ethene.

	C	
	Fig. 11.2	[2]
(ii)	State the chemical formula of the compound that reacts with ethene to produce ethane	ol.
		[1]
(iii)	Poly(ethene) is a white solid that is produced from ethene.	
	Explain why molecules of poly(ethene) are much larger than molecules of ethene.	
		[1]

12 (a) A man has been riding in a car which has plastic seats.

Suggest why friction between the man and the seat causes an electric charge to build up.

(b) The car has two headlamps connected in parallel with each other across a 12V battery.
Complete the circuit diagram in Fig. 12.1 to show how the lights are connected to the battery.
Include a switch in the circuit which will control both headlamps.

Fig. 12.1 [3]

(c) One of the headlamps is shown in Fig. 12.2.

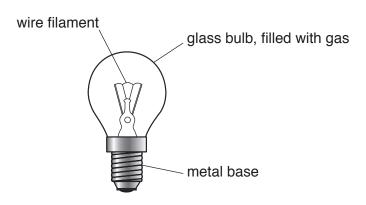

Fig. 12.2

The hot lamp transfers thermal energy by conduction, convection and radiation.

State the energy transfer process that allows thermal energy to be transferred through the metal base.

......[1]

(d) The red reflectors found on cars and bicycles use total internal reflection to allow car drivers to see the back of another vehicle.

They reflect the light from car headlamps.

Fig. 12.3 shows the first part of the path of a ray of light as it passes through the reflector.

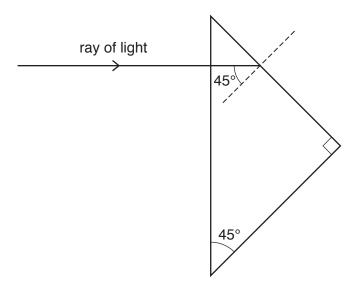

Fig. 12.3

On Fig. 12.3, complete the path of the ray of light to show how it emerges from the reflector. [2]

13 (a) Fig. 13.1 is a drawing of the chromosomes in a human.

		Fig. 13.1		
(i)	State the number of chromos	somes shown in Fig	j. 13.1.	
				[1]
(ii)	State whether the drawing of female.	of the chromosome	es shown in Fig. 13.1 is from a	a male or
	Explain your answer.			
				[1]
(iii)	Describe how the sex of the	person in your ansv	wer in (a)(ii) is inherited.	
				[2]
Cor	mplete the definition of the term	m <i>chromosome</i> usir	ng the words from the list.	
You	may use each word once, mo	ore than once or no	t at all.	
	DNA	embryos	gametes	
	genes	nuclei	mitochondria	
A cl	nromosome is a thread of		, made up of a string	I
of				[2]
				121

© UCLES 2018 0654/33/M/J/18

(b)

(c)	The transmission of genetic material occurs during fertilisation.
	Describe the process of fertilisation.
	[2]
