### **FURTHER MATHEMATICS**

9231/23

Paper 2 Further Pure Mathematics 2

May/June 2020

2 hours

You must answer on the question paper.

You will need: List of formulae (MF19)

### **INSTRUCTIONS**

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do not write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

### **INFORMATION**

- The total mark for this paper is 75.
- The number of marks for each question or part question is shown in brackets [ ].

This document has **16** pages. Blank pages are indicated.

$\frac{\mathrm{d}^2 x}{\mathrm{d}t^2} - 8\frac{\mathrm{d}x}{\mathrm{d}t} - 9x = 9\mathrm{e}^8$	$\epsilon^{3t}$ .

<b>(b)</b> Find the exact value of $I_2$ .	
<b>(b)</b> Find the exact value of $I_2$ .	
<b>(b)</b> Find the exact value of $I_2$ .	
<b>(b)</b> Find the exact value of $I_2$ .	
(b) Find the exact value of $I_2$ .

4

The diagram shows the curve with equation  $y = \ln x$  for  $x \ge 1$ , together with a set of (N-1) rectangles of unit width.

(a) By considering the sum of the areas of these rectangles, show that

$\ln N! > N \ln N - N + 1.$	[5]

$1 - \tanh^2 \theta = \operatorname{sech}^2 \theta.$	[3]
variables x and y are such that $\tanh y = \cos\left(x + \frac{1}{4}\pi\right)$ , for $-\frac{1}{4}\pi < x < \frac{3}{4}\pi$ .	
By differentiating the equation $\tanh y = \cos\left(x + \frac{1}{4}\pi\right)$ with respect to x, show that	
$\frac{\mathrm{d}y}{\mathrm{d}x} = -\csc\left(x + \frac{1}{4}\pi\right).$	[4]
	variables $x$ and $y$ are such that $\tanh y = \cos\left(x + \frac{1}{4}\pi\right)$ , for $-\frac{1}{4}\pi < x < \frac{3}{4}\pi$ .  By differentiating the equation $\tanh y = \cos\left(x + \frac{1}{4}\pi\right)$ with respect to $x$ , show that $\frac{\mathrm{d}y}{\mathrm{d}x} = -\csc\left(x + \frac{1}{4}\pi\right).$

Hence find the first three terms in the Maclaurin's series for $\tanh^{-1} \left(\cos(x + \frac{1}{2}\ln a + bx + cx^2)\right)$ , giving the exact values of the constants $a$ , $b$ and $c$ .	(:

7 (a) Show that an appropriate integrating factor for

$(x^{2}+1)\frac{dy}{dx} + y\sqrt{x^{2}+1} = x^{2} - x\sqrt{x^{2}+1}$			
is $x + \sqrt{x^2 + 1}$ .	[4]		

(b) Hence find the solution of the differential equation

for which $y = \ln 2$ when $x = 0$ . Give your answer in the form $y = f(x)$ .	[7]
